# Opening Karakia

Whakataka te hau ki te uru

Cease the winds to the West

Whakataka te hau ki te tonga

Cease the winds to the South

Kia mākinakina ki uta

Let the breezes blow over the land,

Kia mātaratara ki tai

Let the red-tipped dawn come with a sharpened air,

E hī ake ana te atākura

A touch of frost,

He tio, he huka, he hauhunga

A promise of glorious day

Tīhei Mauri ora

# Housekeeping

- The plenary sessions (until 2pm) will be recorded
- The meeting notes and actions will be published on the website
- Questions can be emailed directly to speakers or [mgi24@linz.govt.nz](mailto:mgi24@linz.govt.nz)

## In person attendees

- Please wait for the microphone to ask questions
- Wi-Fi code - Network Name (SSID): GNS Science Guest, Password: Horouta2024

## Virtual attendees

Post your questions  
in the meeting chat

To speak, please raise your  
hand and lower it afterwards

Please mute your microphones  
if you are not speaking

## In person attendees

Join at [menti.com](https://menti.com)

# Agenda

- 9.15 am Geospatial alignment to policy drivers, New Zealand's case study (*Andy Coote, Consulting Where*)
- 9.35 am IHO S-100, the new hydrographic geospatial standard for marine data (*Jonathan Pritchard, IIC Technologies*)
- 9.55 am The NZ MGI work programme - Celebrating 5 years of achievements, road map updates and setting future priorities (*Anna Meissner, NZ MGI Working Group | Toitū Te Whenua LINZ*)
- 10.30 am Morning tea and group photo**
- 11.00 am Enabling environmental data science and applications (*Peter McComb, Oceanum Science*)
- 11.25 am Improvements in the mapping of commercial fishing effort (*Riki Mules, MPI*)
- 11.45 am Electronic Navigational Charts and ArcGIS Maritime Server: Revealing the potential of the LINZ ENC Service beyond navigation (*Richard Wells, NZDF and John Plunkett, Eagle Technology*)
- 12.10 pm Lunch**
- 1.00 pm Seabed 2030 and the challenge to map the World's Oceans (*Kevin MacKay, Seabed 2030*)
- 1.25 pm Coordinated seafloor mapping - Opportunities for broader outcomes (*Stuart Caie and Brad Cooper, Toitū Te Whenua LINZ*)
- 1.45 pm Interactive session and closing online meeting (*Anna Meissner, NZ MGI Working Group*)
- 2 pm Workshop national coordinated seabed mapping programme and afternoon tea
- 4 pm Refreshments and tour of the National Geohazards Monitoring Centre

## Benefits & Opportunities for Marine Geospatial Information in New Zealand

Phaedra Upton (GNS Science)

# MGI 24

## Geospatial alignment to policy drivers: New Zealand case study

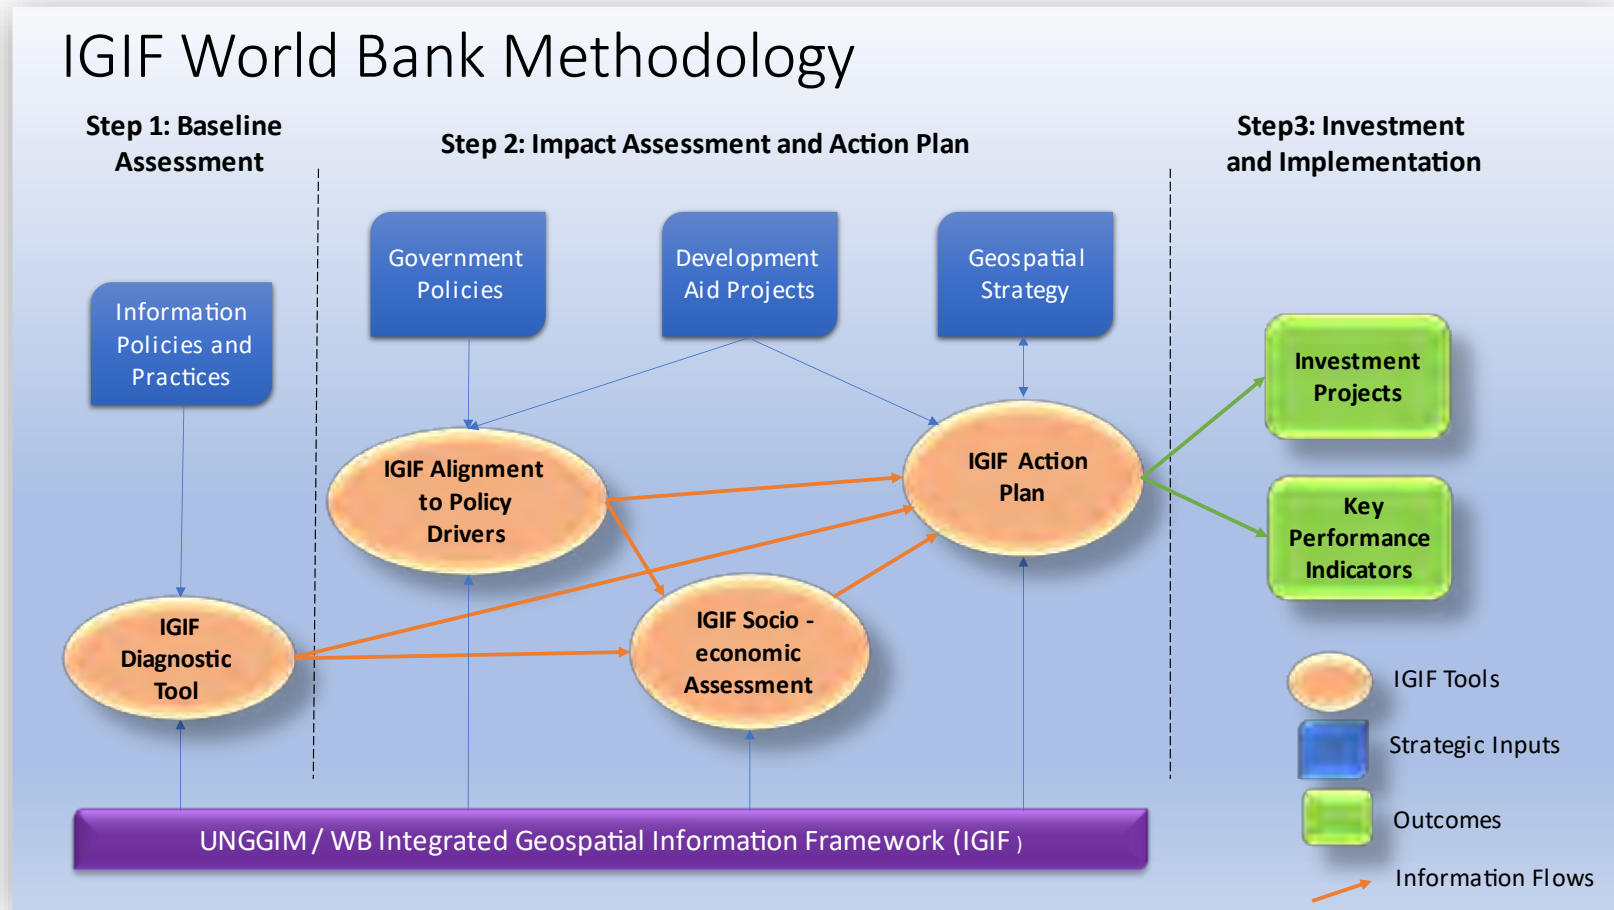

Andrew Coote  
Chief Executive  
ConsultingWhere

# Context: Integrated Geospatial Information Framework(IGIF) Implementation Methodology

The World Bank Group has established an IGIF Implementation Methodology and corresponding analytical toolkit to support the use of the IGIF:

- **Incrementally strengthen geospatial information management** - customized to specific countries and priorities
- **Link to financing:** based on analytics, using standard WBG infrastructure model

The diagram shows the analytical tools (in orange), key inputs (in blue), the IGIF in purple, outcomes (in green). Arrows show the different types of information flows.

# World Bank IGIF Templates

•Diagnostic/Baseline Assessment

**Business case**  
-Alignment to Policy/ Business Drivers  
-**Socio-Economic Impact Assessment**

Action/Investment Plan

# Workshop Objectives

- Overall aim of MGI WG - Focus on collaboratively delivering outcomes that optimally utilise marine geospatial information to the cultural, social, environmental and economic benefit of New Zealand.
- In these sessions we wanted to:
  - To examine the problem(s) we are trying to solve by identifying the key policy drivers that MGI can help to deliver.
  - To document the use cases for MGI in a way that allows us to prioritise them.
  - From these inputs to define a vision of what success looks like.
- We successfully used an online collaboration tool called Miro throughout the workshops.

# Geospatial Alignment to Policy Drivers

**Geospatial Alignment to Policy Drivers Template** is used to align the Government's strategic objectives and international commitments to specific spatial use cases (applications) and then prioritizes them based on how well they support and accelerate achieving these strategic objectives.

This work is **key for communications and awareness raising with decision makers.**

The Geospatial Alignment to Policy Drivers Template is available for download [here](#).

# Session 1 Outputs: Key Policy Clusters

Discussed how to analyse government policies and cluster them into high-level goals that MGI can help achieve. The results of this work was the following:

- 1 **Food security** - relates to primary industries. Includes agriculture, forestry, fisheries
- 2 **National security and safety**, including disaster risk reduction/management/resilience
- 3 **Protecting Natural Capital**, relates to all natural assets including environment, biodiversity
- 4 **Climate Change** –adaptation and mitigation
- 5 **Digital Transformation**, includes Data quality improvement, Data collection, Analytics (including AI), Ocean twin, Data management
- 6 **Economic Growth**, including blue economy and tourism
- 7 **Energy security**, includes renewable energy
- 8 **Culture and Heritage**, includes Mataranga Māori
- 9 **Social welfare and health.**

## Session 2 Outputs: Document Key Use Cases

1. Prioritise one or more use cases each, covering all relevant sectors
2. Explore how MGI can contribute to their delivery
3. Identify gaps, challenges /blockages, focus area for the WG to better deliver use case /meet policy drivers.
4. Link to IGIF Strategic Pathways
5. Develop vision / mission based on where MGI can deliver on highest priority drivers

# Use Case Inventory

Use Case Summary	Priority	Detailed Description	Primary Outcomes Description	Outcome Categories	Policy or Strategy Reference	Principal Data Types and Sources	Education and Capacity Building
Improved Decision Making in Marine Spatial Planning		<p>MSP reflects the idea that oceans, seas and large internal bodies of water implement place-based management, where regulators delineate particular areas (Zoning) of the marine space.</p> <p>Create a Governance regime for those areas which address the needs and requirements of all users simultaneously.</p>	<p>Effective custodianship and stewardship of renewable and non-renewable resources(e.g. fish, hydrocarbons, minerals).</p> <p>Single authoritative marine geospatial source for Marine Spatial Planning for public confidence and legal certainty.</p>	<p>2.1 2.2 2.3 4</p>	<p>Natural Capital Climate Change Energy Security</p>	<p>Diverse and potentially fragmented, from hard sources such as Bathymetry to dynamic data such as AIS and semi-subjective surveys of limited time-validity.</p>	<p>Hybrid technical skills across environmental science, geospatial and computer science.</p>

# Outcome Categories

1	Revenue Generation
	1.1 Increased taxation revenues
	1.2 Increased value from public assets
	1.3 New forms of revenue (e.g. congestion charging, parking fees)
2	Improved Efficiency - saving money
	2.1 saving money / time for Public Sector
	2.2 saving money/time for Businesses
	2.3 saving money/time for citizens
3	Societal Benefits
	3.1 Saving Lives
	3.2 Improving Quality of Life
	3.3 Transparency
	3.4 Other (please describe)
4	Decision Support - the outcomes of implementing the use case, improve information to support decision-making
5	Public Investment and Asset Management
6	Stimulate Innovation

# Session 3 Output: Establishing Priorities

- Strategic Perspective:
  - Alignment to Government Agenda
- Economic Perspective:
  - Quantifiable Benefits
  - Timeframe for Realisation
- Qualitative Benefits:
  - Social Welfare Improvements
  - Environmental Protection

# Exercise

- For this exercise imagine you are part of the most senior decision-making body in Government, the Cabinet of Ministers.
- The Cabinet receives many proposals from Government department for investment and must prioritise them and decide which to fund and when.
- You as a team have prepared use cases for improvement in Government services, mostly within your Ministry.
- Now it is the time to “cast your votes” for what you think, as a Cabinet Member, should be supported with investment.
- There are two key criteria to base your assessment upon:
  - Strategic perspective
  - Economic perspective
- In addition, you can add social and environmental justifications in narrative form.

# Next Steps

- Complete prioritisation work
  - Select achievable goals for MGI
    - Short-term (within 1 year)
    - Medium-term (2-3 years)
    - Long-term (5 years)
- Prepare presentation for senior management
  - Vision
  - Overall goals – expressed in terms of supporting Government objectives
  - Outline Programme Plan with resources / deliverables / business case
- Secure buy-in to Strategy
  
- Anna will pick up on progress with this work in her presentation

Thank You!

# S-100

# E-Navigation

# What is it?

## Supports:

- Greater variety of marine-related digital data sources, products and customers

## Enables:

- New applications that go beyond the scope of traditional hydrography

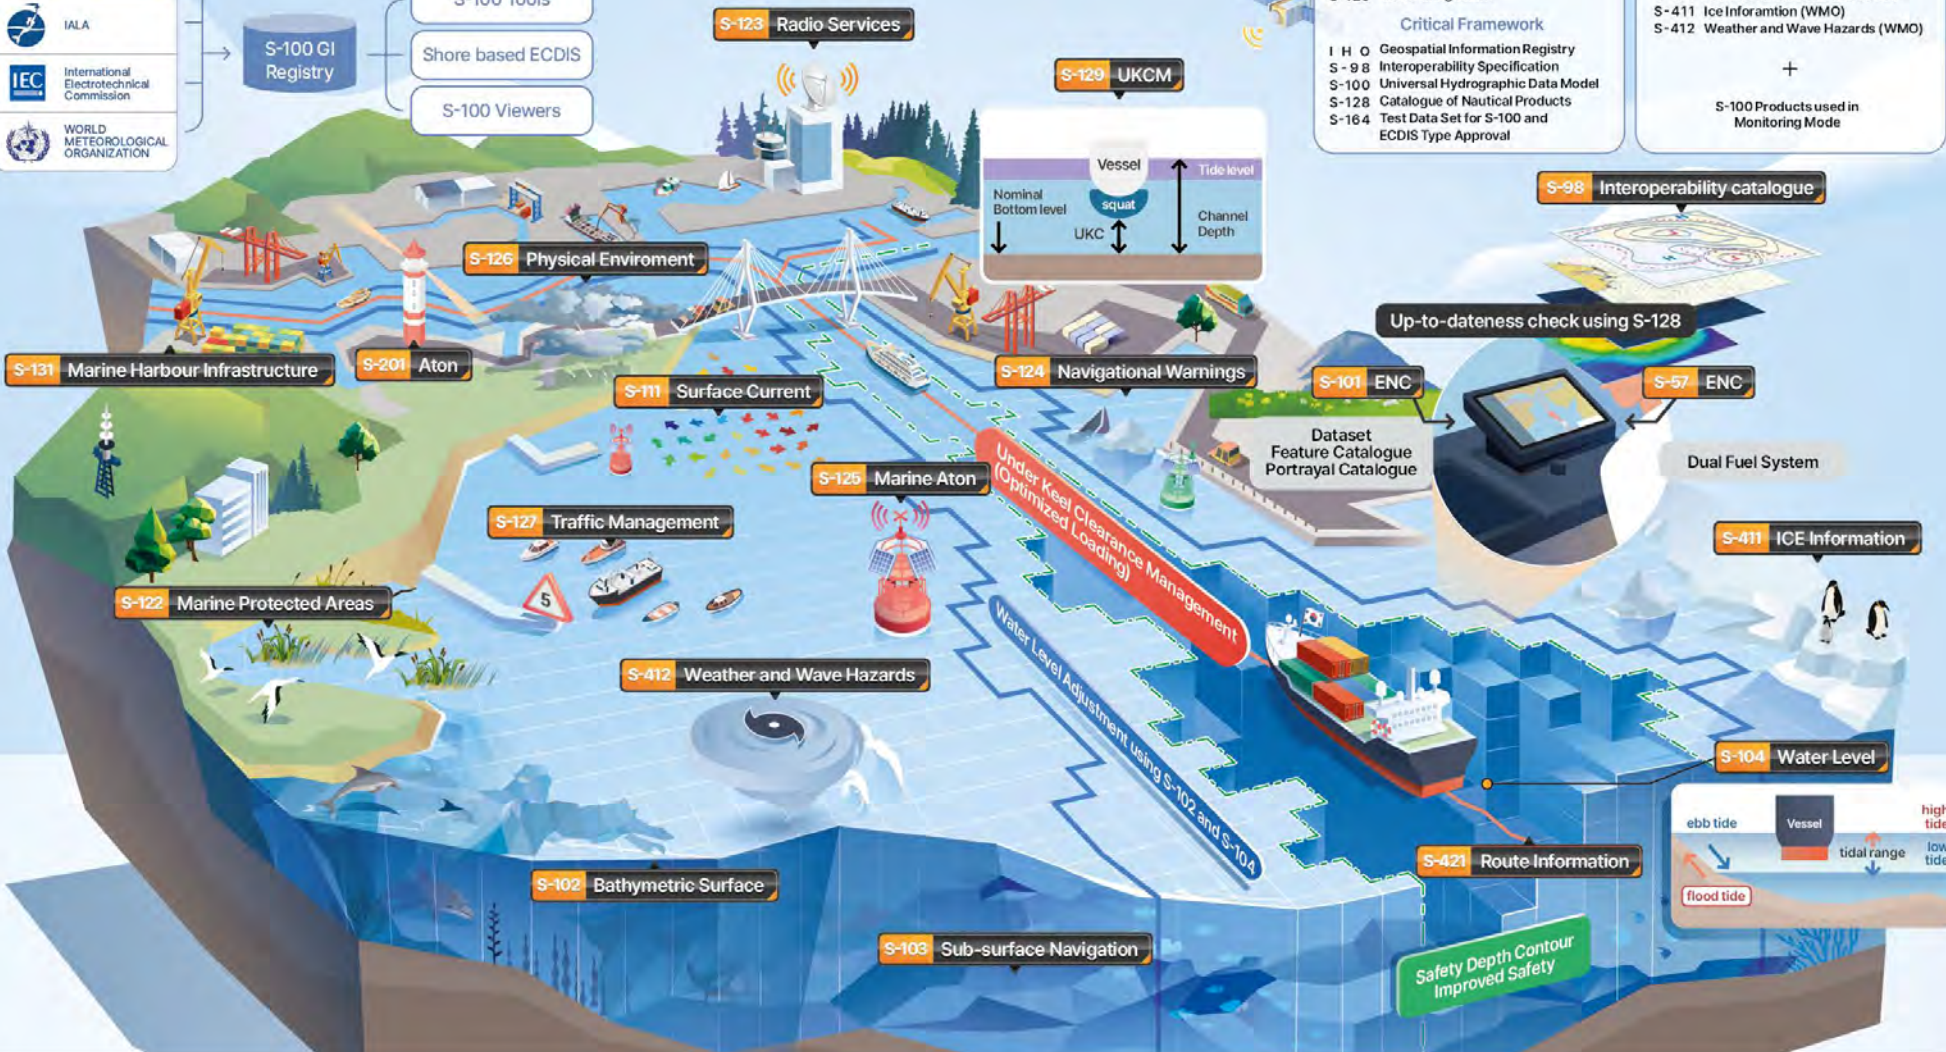

## Incorporates:

- 3D, time-varying data (x, y, z and time) and web-based services for acquiring, processing, analyzing, accessing and presenting marine data

Machine readable nautical information  
(Facilitate IMO MASS)

MGI 24, 3 May 2024

# Actions Meeting 5 – Feb 2023

	What	Who	When	Status
5.1	Review feedback from the meeting and identify next steps/ refine work programme, priorities and how to resource activities.	SG	End April 23	CLOSED
5.2	Resulting SG output (work programme / priorities) to be shared with the wider WG.	LINZ	End April 23	CLOSED
5.3	Share marine mapping economic reports	LINZ	Early March 23	CLOSED
5.4	Raise awareness of the WG with Iwi/ Māori and encourage participation	All	On-going	
5.5	Identify contestable funding opportunities	All	On-going	
5.6	Share outcome of Marine innovation Kaupapa 2 – Te Ao Māori worldview on MGI	LINZ	Dec 23	

# TOR NZ MGI Working Group

## Challenges

The NZMGI-WG identified a number of challenges that could prevent the success of the group and achievement of objectives:

	Challenge	Mitigation
1	Resourcing in terms of funding, capacity and capability.	The NZMGI-WG will establish a national common strategy, prioritise work and explore funding options. A Steering Group has been established to provide directions and approve the NZMGI-WG work and strategy.
2	Agreement on common goals, notably because of different business models and agendas.	The Steering Group will provide leadership, set directions for the work plan and facilitate the decision-making process.
3	Fair and meaningful representation.	The NZMGI-WG is open to representatives from the wider marine sector or with marine geospatial interests. Members are encouraged to engage within and outside their organisation, and at a higher level, to actively grow awareness of the NZMGI-WG work.
4	Ensuring the interests of Māori/ Iwi are well represented	All working group members will reach out to their relevant Māori/ Iwi contacts to make them aware of the NZMGI-WG and invite and encourage participation.
5	Getting buy-in at the senior/ executive level.	The NZMGI-WG will develop case studies showing the benefits of the work undertaken and communicate them to senior/executive champions from other organisations to influence up and across agencies.
6	Data storage and maintenance in perpetuity.	The NZMGI-WG will stay connected and aware of international best practise.
7	Industry/private sector see value in opening access to their data.	Case studies will describe the benefits and value of open data.

## Working Group Membership

To ensure broad expertise, fair representation and effectiveness, the NZMGI-WG is open to representatives with interest in marine geospatial information from Central and Local Government agencies, Māori / Iwi groups, Crown Research Institutes, academia and the private sector.

# TOR NZ MGI Steering Group

## 3. Roles and responsibilities

### 3.1 Steering Group Members

- Participate in the development, review, and management of the MGI work programme,
- Provide strategic direction and leadership to ensure that the MGI work program aligns with national interests to deliver lasting benefits,
- Determine work programme priorities with input from the working group,
- Work to achieve the MGI programme vision,
- Identify opportunities to advance the goals and objectives of the NZMGI-WG (see Terms of Reference for the NZMGI-WG),
- Connect experts from own organisations to the SG to advance work supporting Iwi/Māori accessing and using marine geospatial data
- Ensure that the correct organisations are represented in the Steering Group, by reviewing membership once a year,
- Share knowledge and technical expertise,
- Bring the interests, perspectives and priorities of their organisations and sector they represent and communicate current issues, risks, opportunities with relevant entities /groups/ initiatives (e.g. Ocean Secretariat, Marine Managers Hub, etc) for collaboration and future needs in the MGI space,
- Actively contribute (including resourcing) to work programme deliverables (incl. webinars, use case library),
- Attend and prepare for Steering Group and Working Group meetings, including propose agenda items, and complete assigned action items within agreed timeframes,
- Support the coordination and facilitation of the NZMGI-WG,
- Promote and communicate the value of the MGI programme to the marine community, government, and public,
- Elect a Chair and Vice-Chair when needed.

# Actions Meeting 5 – Feb 2023

	What	Who	When	Status
5.1	Review feedback from the meeting and identify next steps/ refine work programme, priorities and how to resource activities.	SG	End April 23	CLOSED
5.2	Resulting SG output (work programme / priorities) to be shared with the wider WG.	LINZ	End April 23	CLOSED
5.3	Share marine mapping economic reports	LINZ	Early March 23	CLOSED

MGI 24, 3 May 2024

Key marine geospatial datasets are crucial for New Zealand. They support many aspects of our economy and contribute to better decision-making. Three percent of New Zealand's GDP is related to the blue economy, with a total of \$7.4 billion directly related to sectors that rely on the maritime area.

Admin areas and boundaries

Infrastructure

Biology

# NZ MGI Working Group

- Est. February 2019
- 2024: 200+ members from 70+ organisations across the public and private sector, CRIs, research institutes, Iwi/hapu.

Working together to:

- Collaborate on data collection and focus on data reuse
- Increase transparency of data collections and surveys
- Simplify data discovery
- Facilitate data interoperability through standards
- Provide national leadership and coordination across agencies

The NZ MGI Steering Group

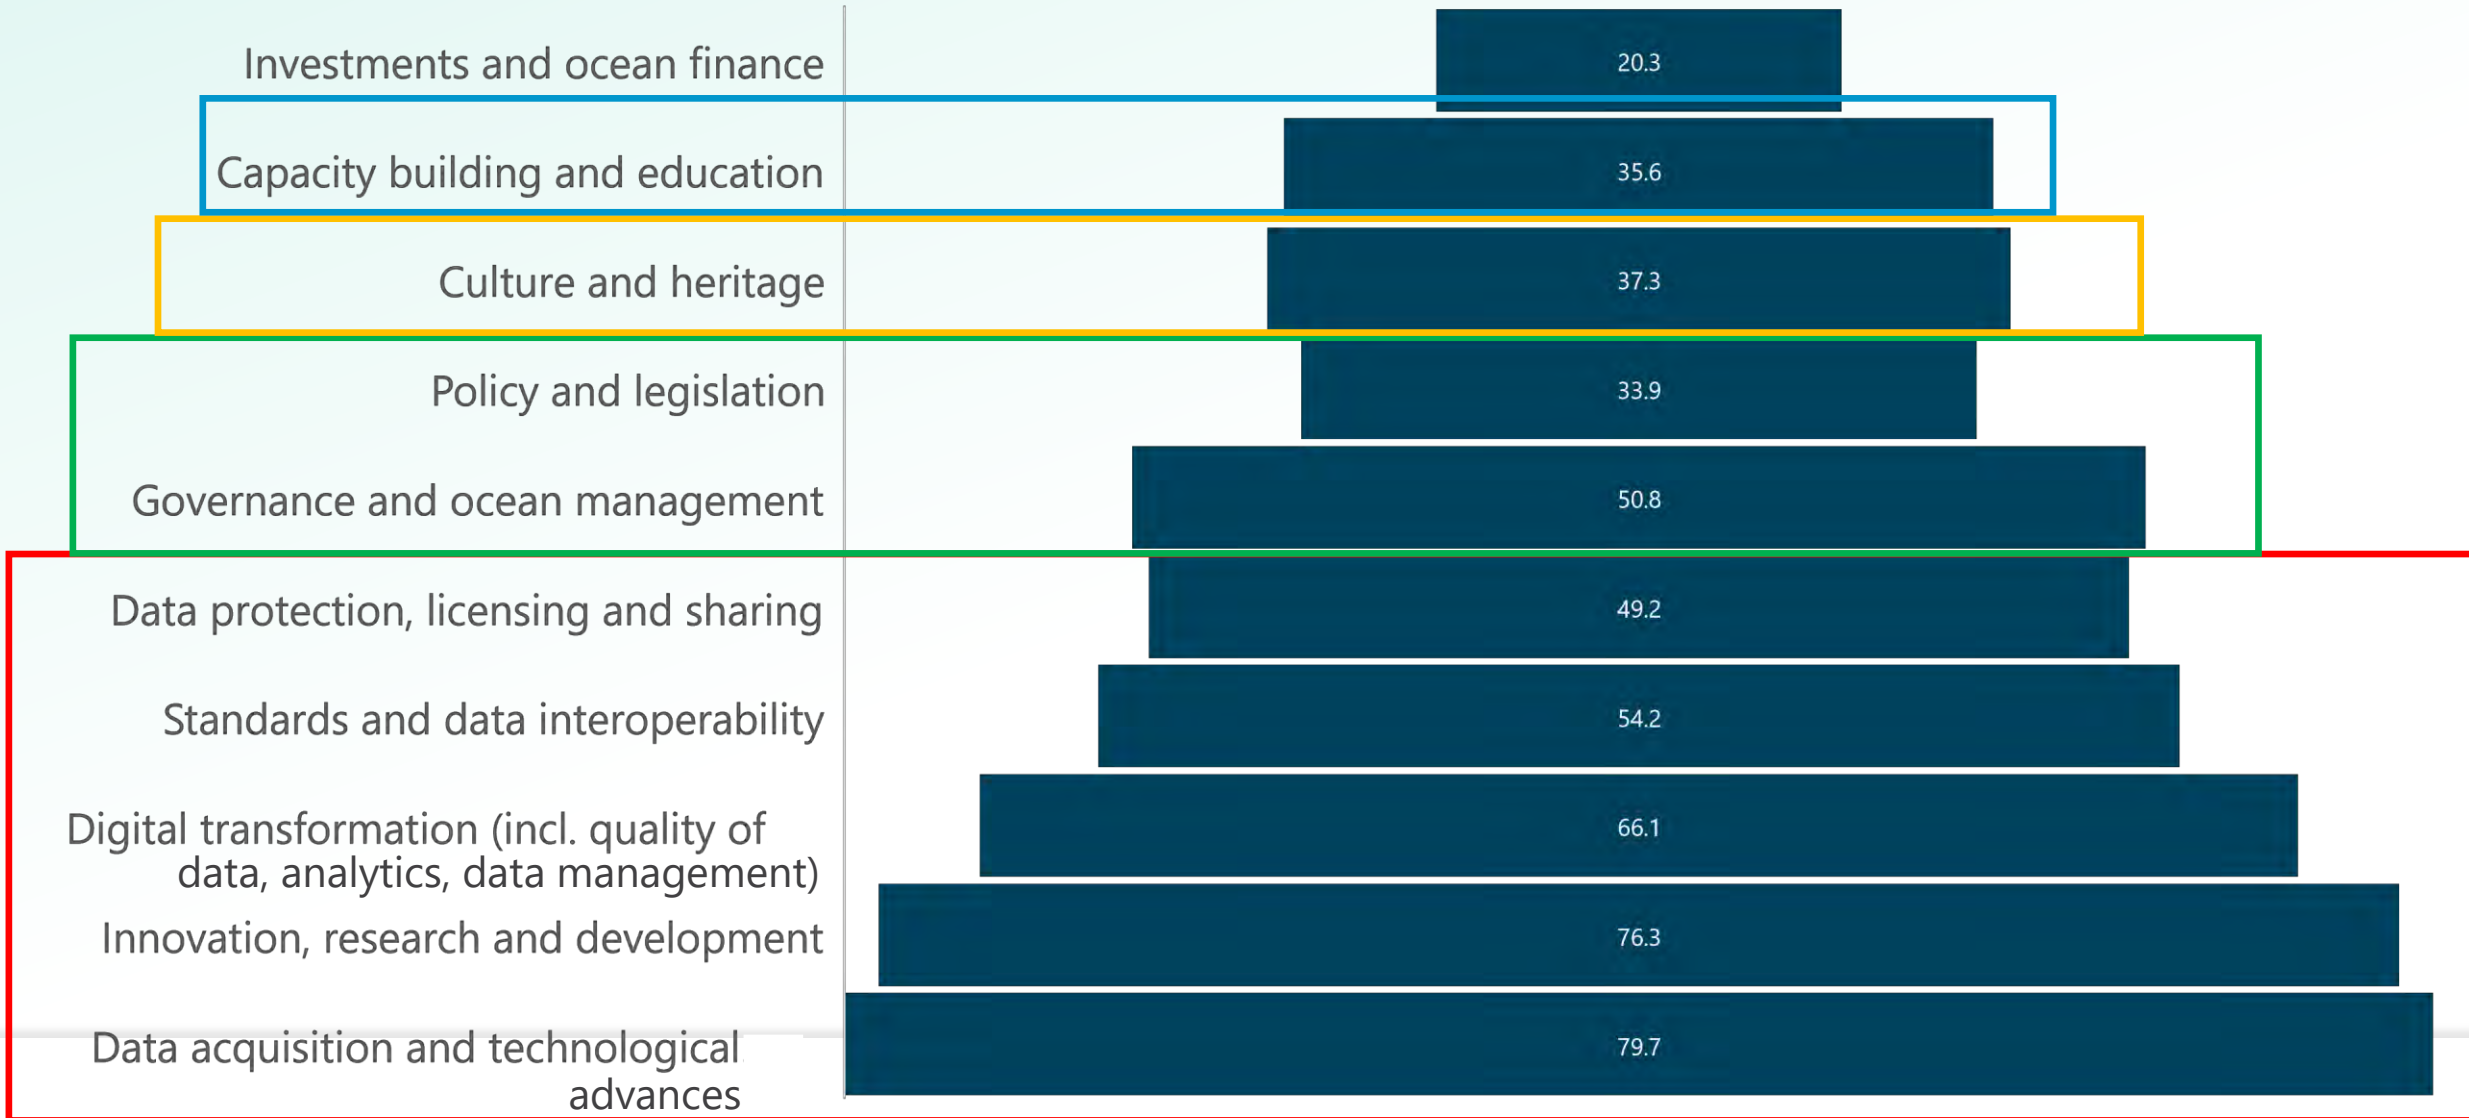

- Department of Conservation | Te Papa Atawhai
- Land Information New Zealand | Toitū Te Whenua
- Maritime New Zealand | Nō Te Rere Moana Aotearoa
- Ministry of Business, Innovation & Employment | Hikina Whakatutuki
- Ministry for the Environment | Manatū Mō Te Taiao
- Ministry for Primary Industries | Manatū Ahu Matua
- New Zealand Defence Force | Te Ope Kātua o Aotearoa
- Office for Māori Crown Relations | Te Arawhiti
- National Institute of Water and Atmospheric Research | Taihoro Nukurangi
- GNS Science | Te Pū Ao
- Regional councils / Coastal Special Interest Group

# Common interests

# Achievements (2019 – 2024)

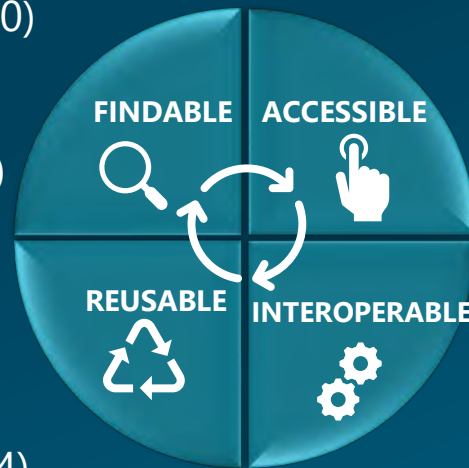

Goals of the NZ MGI Working Group:

- MGI is Findable, Accessible, Interoperable and Reuseable (FAIR Data Principles)
- High-value marine geospatial data is collected and freely available
- Widespread knowledge of data applications and uses
- Visibility of future marine data capture to reduce duplication and leverage opportunities for partnerships
- Timely availability of datasets

✓ MGI web app (2024)

- ✓ MGI inventories data.govt.nz (2020)
- ✓ MGI stocktake guidance (2021)
- ✓ Visibility of surveys (2023)
- ✓ NZ National MGI inventory (2024)

✓ Data portal investigations (2019-2024)

- ✓ Infographics (2018, 2019)
- ✓ Use case library (2021-2024)
- ✓ Webinars (2024)
- ✓ Marine Data Innovation Project - Te Ao Māori perspective (2024)

- ✓ NZ MGI metadata guideline (2021)
- ✓ NZ MGI vocabulary guidelines (2021)
- ✓ Marine Data Innovation Project - technical POC (2022)

## Fundings:

- NZ Open Government Data Programme, StatsNZ (2019)
- Digital Public Service Innovation Fund, DIA (2021)

### Mapping Aotearoa's Seafloor

A visual demonstration of Toitū Te Whenua LINZ's seafloor mapping programme

[Overview](#) [HYPLAN areas](#) [Recent surveys](#) [Suggest a survey](#) [Case studies](#) [Contact us](#)

#### Overview

Seabed mapping gives us data we need to update charts and meet our obligations to make navigation around Aotearoa safer. It gives us a detailed view of the seafloor so we get a better picture of how the marine environment has changed with time, weather and geological events.

HYPLAN is Toitū Te Whenua LINZ's hydrographic survey programme to map the seafloor. Survey areas are based on a hydrographic risk assessment, and are reviewed annually. We are currently undertaking a new risk assessment to identify new priority areas.

We seek partnering opportunities to collect datasets that can be used beyond safety of navigation such as: resilience to natural events, management and protection of marine resources, and scientific research.

What areas would you like to see included? [Jump to the Suggest a survey section.](#)

### Workshop 3 May 2024

- What would a coordinated approach to seabed mapping look like for NZ?
- Develop data capture guidance?

#### HYPLAN areas

The map shows areas of past surveys, surveys underway, and areas being considered around the Aotearoa New Zealand coastline, plus the Chatham Islands and Sub-Antarctic Islands.

Use your mouse to move the map and the + and - buttons on the bottom right to zoom in and out.

You can also click on an area to get more information about a survey.

All data can be requested through the LINZ Data Service, where we provide free online access to Aotearoa's land and seabed data.

### WĀNANGA INVITATION

#### Tiaki moana i roto i te ao matihiko

Caring for marine space in the digital world  
Nau mai, haere mai! Please join us.

---

### HUITOPA / ONLINE HUI INVITATION

#### Tiaki moana i roto i te ao matihiko

Caring for marine space in the digital world  
Nau mai, haere mai! Please join us.

**TE TONO THE INVITE**  
Toitū te Whenua Land Information NZ invites you as someone with a keen interest in tiaki moana, to be part of shaping the future of marine spatial data and mapping, to:

- Empower kaitiaki,
- Grow and protect mātauranga moana,
- Care for and protect marine spaces.

**TE WERO THE CHALLENGE**  
Marine spatial data is being generated and gathered by a number of government agencies and other entities, but, is widely dispersed and poorly coordinated, has no clear and consistent approach in regard to mātauranga Māori, and is difficult to centrally access.

**TE ANGITU THE OPPORTUNITY**  
Toitū te Whenua LINZ, alongside other government agencies, is exploring how that can be improved. This requires exploring questions regarding the identification, collection, collation, mapping, access to, protection of, presentation of, and usability of, marine data and associated mātauranga Māori.

**Huitopa Online hui**  
**ĀHEA? WHEN?**  
9:00-10:30am  
Friday 9th June  
(reduced from 3 hrs)

**KEI WHEA? WHERE?**  
Online  
See calendar invite.

**KO WAI? WHO?**  
Attendees:  
Invitees to the wānanga that took place on 20 April, who were unable to attend or expressed interest in participating in an online opportunity.

**Host:**  
Toitū te Whenua - Land Information NZ.  
**Project Team:**  
Lead: Katherine Short, Terra Moana.  
Kaitiaki: Kimberley Maxwell, Rangahauwai.  
Facilitator: Karl Wixon, ARAHIA Pathfinders.

To attend, please accept the calendar invite attached to this email.

Exercise 1: Quick Reflection / Presentation by Rachel Gabara.

Exercise 2: Quick Reflections / Presentations by Kelly, Enrique, Hugh and Nepia.

Exercise 3: Quick Reflections / 1 on 1 participant kōrero.

MGI Data Portals project aims to:

- support data users in finding, accessing and reusing NZ MGI
- encourage data custodians to share the MGI they hold

Purpose of the portal	Discoverability of data or metadata catalogue Visualisation of data and geospatial information Access to data Other
Types of marine geospatial data supported by the portal	Species data (e.g. seabirds, fish, algae, invertebrate, marine mammals, etc) Community data (e.g. species distribution, modelling datasets, species turnover, etc) Ecosystem data (e.g. marine habitat) Depth/bathymetry (e.g. grids, soundings, contours, surfaces, models, etc) Geophysical (e.g. seafloor characteristics, backscatter, sedimentology, slopes, curvature, rugosity, ground sampling, etc) Water observations (e.g. temperature, turbidity, water column backscatter, salinity, sound velocity profiles, etc) Sea level data (e.g. coastline, tidal data, etc) Meteorological data (e.g. air temperature, air pressure, wind, etc) Marine infrastructure (e.g. hazards, marine farms, coastal construction, aids to navigation, etc) Human activities (e.g. pollution, plastics, chemicals, oil, gas, vessel tracks, commercial catch effort, recreational fishing intensity, etc) Management areas (e.g. marine reserves, sanctuaries, fishing restrictions, Mātaitai, Taiapure, fishing reporting grids, etc) Other
Data is supplied by	Own organisation Other organisations / Third party
External data is uploaded by	Portal owner / Own organisation Data supplier
External data is managed by	Portal owner / Own organisation Data supplier
Third party data supplier is responsible for	Costs of their data being uploaded on the portal Costs of their data being maintained on the portal Costs of their data being stored on the portal Costs of their data being accessed/downloaded on the portal Costs of the portal infrastructure being maintained and administered Other costs
Accessibility	Direct download API Webservices (wmts, wms, wfs, etc) Physical media (USB drive, disc, etc.) Other
Data exploration	Search Filter Subset Custom visualisation (e.g. turning layers on/off, zooming, changing basemap, etc)
Data reuse	Data released under open licence (e.g. Creative Commons, etc) Licensing restrictions exist Other licensing policy Free access/reuse the data
Standards	ISO 19115/19139 OGC Web Services Predefined / standardised vocabularies Proprietary standard Custom standards Other

Action 6: SG creates a survey to understand value of data portal investigation

Action 7: WG completes above survey

MGI newsletter 6, March 2024

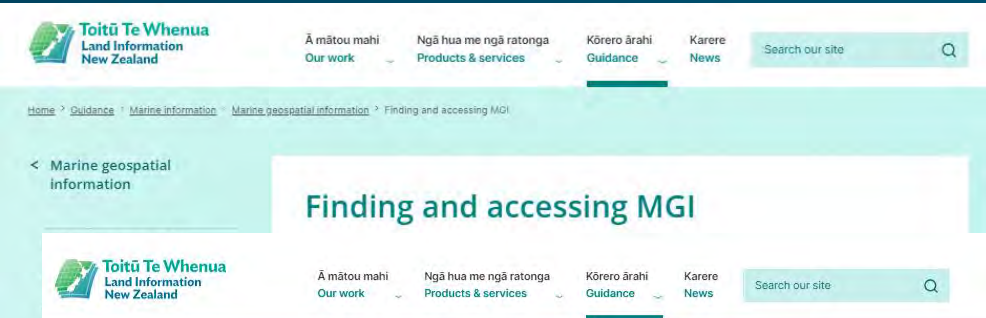

Anna Meissner – Senior Marine Geospatial Specialist, Toitū Te Whenua Land Information New Zealand

Miles Dunkin – Manager Geoscience Information, Ministry of Business, Innovation and Employment.

Jenny Black – Geospatial Data & Analysis Team Leader, GNS Science Te Pū Ao.

Home > Guidance > Marine information > Marine geospatial information > Finding and accessing MGI

### Finding and accessing MGI

Home > Guidance > Marine information > Marine geospatial information > Managing and reusing MGI

### Managing and reusing MGI

A “collect once, use many times” approach can grow the value of marine geospatial data.

Key datasets are accessible to users

- customary interests
- cultural marine-scape
- water temperature
- bathymetry
- contaminants
- sea level data
- sediments
- biodiversity
- boundaries
- backscatter
- tiaki moana
- resource management
- heritage & culture
- climate change
- conservation & ecology
- tourism

## Action 10: WG contributes to newsletters (topics and content)

# Actions Meeting 6 – May 2024

Action	What	Who	When	Status
4.5	Understand how Data Standards and Quality Assessment framework and toolkit can apply to NZ MGI work programme	SG + NZTA	31 Aug 2024	OPEN
6.1	Identify gaps for future data management guidelines	All WG	30 Sep 2024	OPEN
6.2	Organisations contribute to National MGI Inventory - contribution button in the MGI webapp <a href="#">Experience (arcgis.com)</a>	RC + others	30 Sep 2024	OPEN
6.3	Provide feedback on MGI webapp + inventory - feedback button <a href="#">Experience (arcgis.com)</a>	All WG	31 Jul 2024	OPEN
6.4	Improve MGI webapp + national inventory based on WG feedback	LINZ + MPI	30 Sep 2024	OPEN
6.5	Increase visibility of international research in NZ waters	LINZ, GNS, NIWA	31 Aug 2024	OPEN
6.6	Create a survey to understand value of data portal investigation	SG	31 Jul 2024	OPEN
6.7	Provide feedback / complete survey on data portal investigation	All WG	30 Sep 2024	OPEN
6.8	Contribute topics for future webinars	All WG	31 Aug 2024	OPEN
6.9	Contribute topics and content for use cases (form linked on MGI website)	All WG	31 Aug 2024	OPEN
6.10	Contribute topics and content for newsletters - email <a href="mailto:editorsmgi@linz.govt.nz">editorsmgi@linz.govt.nz</a>	All WG	31 Aug 2024	OPEN
6.11	Share topics for presentations and workshops for MGI 25	All WG	28 Feb 2025	OPEN

Thank you for being part of this work!

Any Questions?

## Annual Meeting 6

# Karakia mō te Kai

Whakapaingia ēnei kai

Bless these foods

Hei oranga mō ō mātou tinana

For the goodness of our bodies

Mō ō mātou wairua hoki

And our spirits also

Hāumi e! Hui e! Tāiki e!

Draw together! Affirm!

Morning tea break

Session 2 will start at 11.00 am

# Session 2

## Data Reuse

Miles Dunkin (MBIE, Vice-Chair NZ MGI Steering Group)

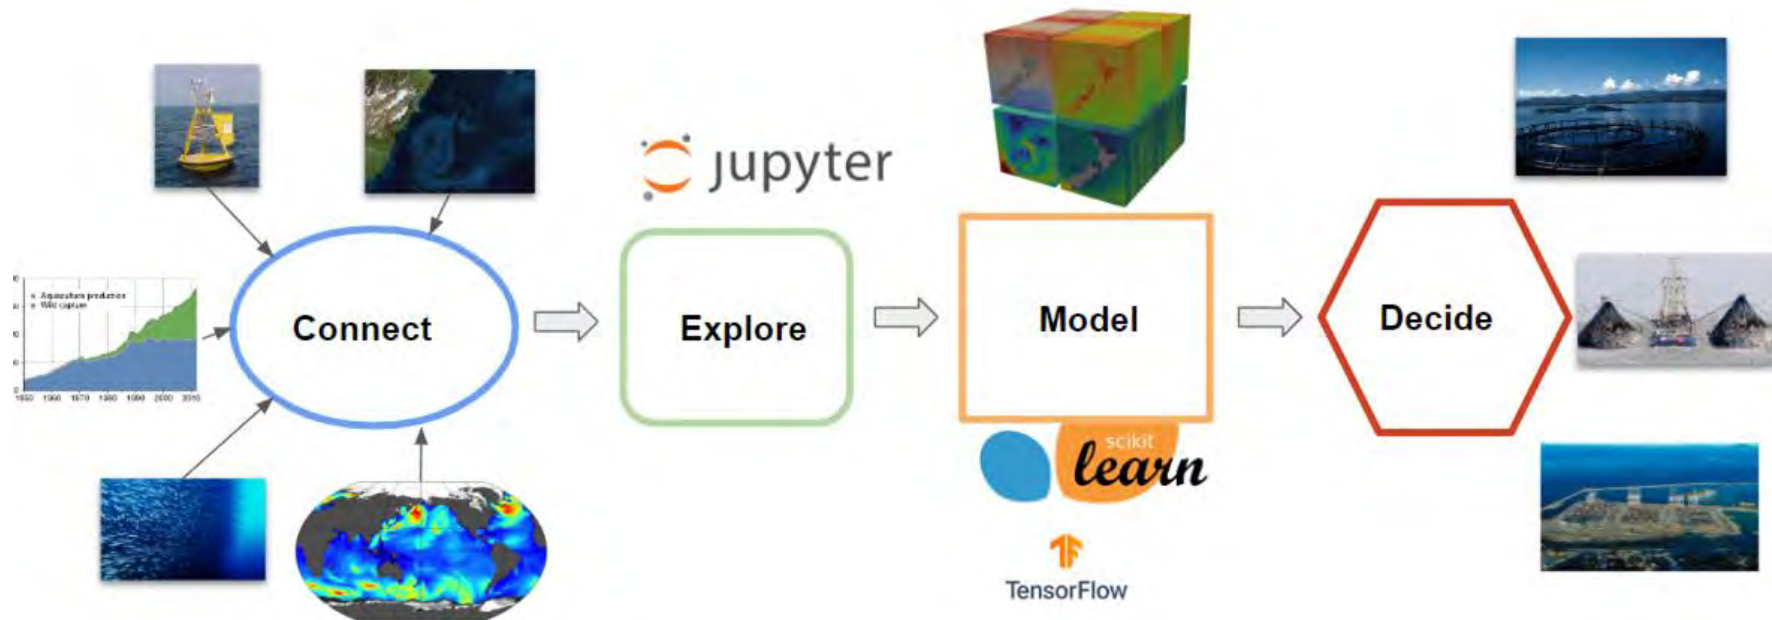

OCEANUM  
OCEAN NUMERICAL

# Enabling environmental data science and applications

An update on Datamesh and the ongoing developments in the OCEANUM.IO platform

NZ Marine Geospatial Information Working Group meeting - 3 May 2024

# The mission is transforming data into decisions

There is a need to transform data into decisions - faster

## Oceans of data!

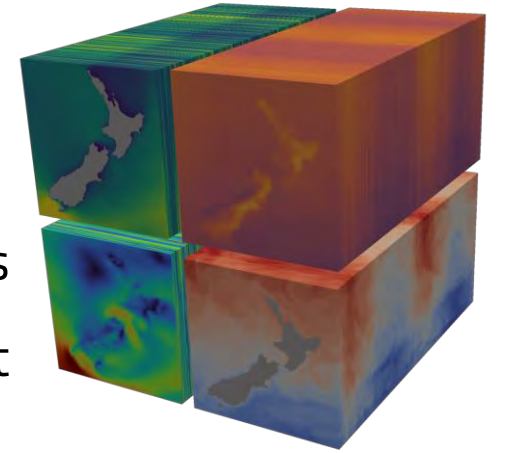

- But it's often hard to find and even more difficult to access.
- It might be poorly described or in a weird format, and it's not LLM-ready.
- You probably spend a lot of your time just getting it sorted.
- All this is even harder for people in the lesser developed economies.

Imagine a world where the datasets of importance to you are searchable, and accessible - in a consistent format over the spatial and temporal extent you require, delivered to your preferred working environment within seconds.

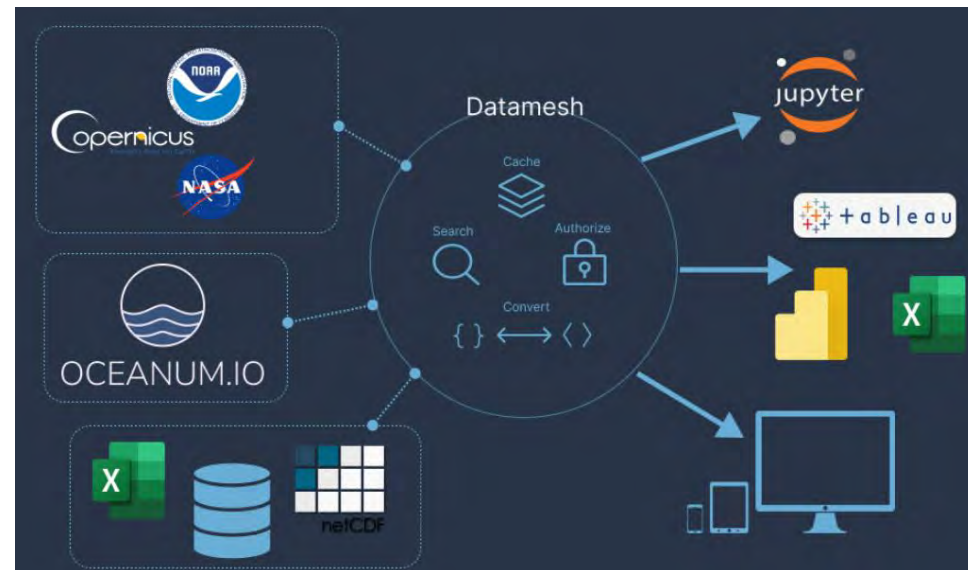

## Strategic purpose

- OCEANUM.IO seeks to abstract away the core data engineering problems for both expert and non-expert users in environmental science and adjacent disciplines.
- The science community benefits from well-architected national data infrastructures, but even these can create barriers and sources of friction for users.
- Success is making our client developers, engineers, planners, scientists and analysts reach their conclusions and deliver their solutions faster and more cost-effectively.
- Goal is to promote data democracy and lubricate the applied science economy, while trying to reduce knowledge asymmetry.

## Our technical solution - Datamesh

- Full authorization layer
- Format conversion, interpolation and subsetting
- Data caching to optimise access performance
- Native support for Python and R data science libraries
- Massive scalability within the cloud to match user demand
- APIs conforming to Open Geospatial Consortium specifications
- Connection to internal data services and databases
- Connection to external 3rd party data sources
- Integration with analysis and display platforms such as Jupyter, ArcGIS, QGIS, Google Earth

The DIA proof of concept successfully deployed the Datamesh across four NZ govt agencies.

Ministry for Primary Industries  
Manatū Ahu Matua

# The deployment landscape to date...

# Creating effective pathways to impact

Well organised multi-source data allows rapid development of innovative apps and dashboards.

Operational pipelines are already in place, so moving from R&D to impact becomes a simple step.

Calculate new parameters on the fly and leverage emerging LLMs.

Create meaningful knowledge.

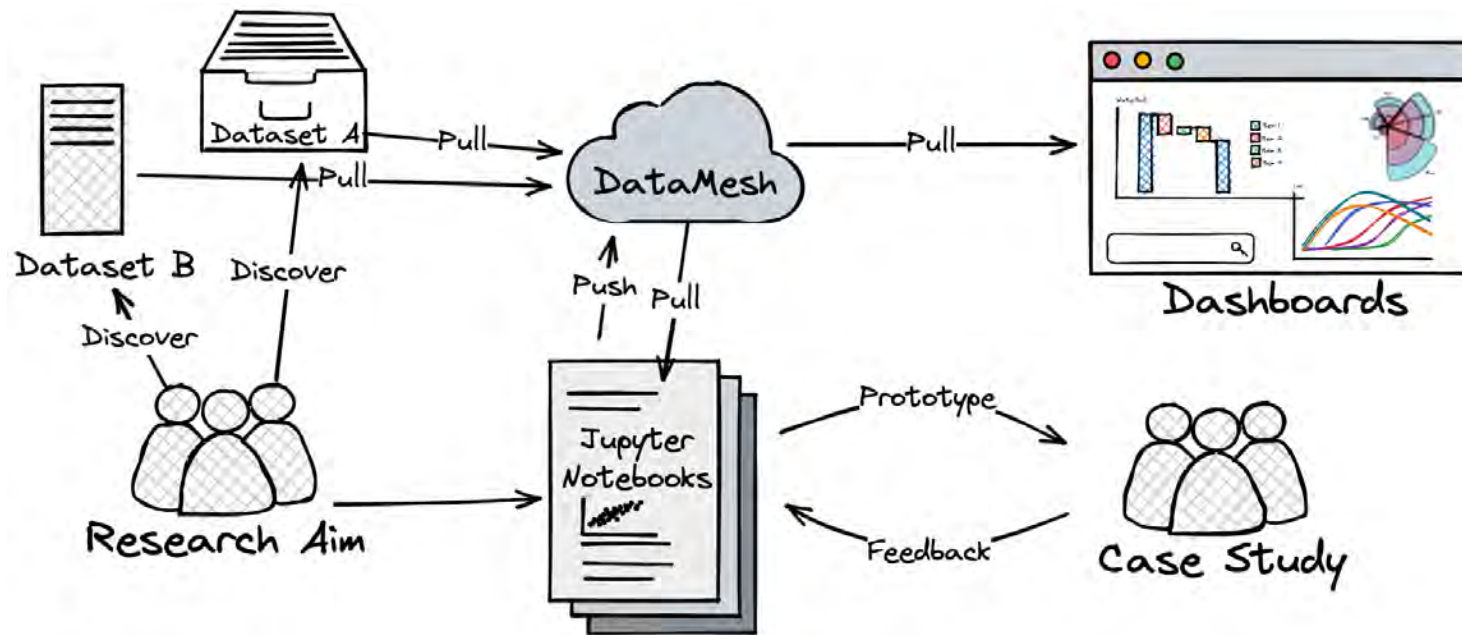

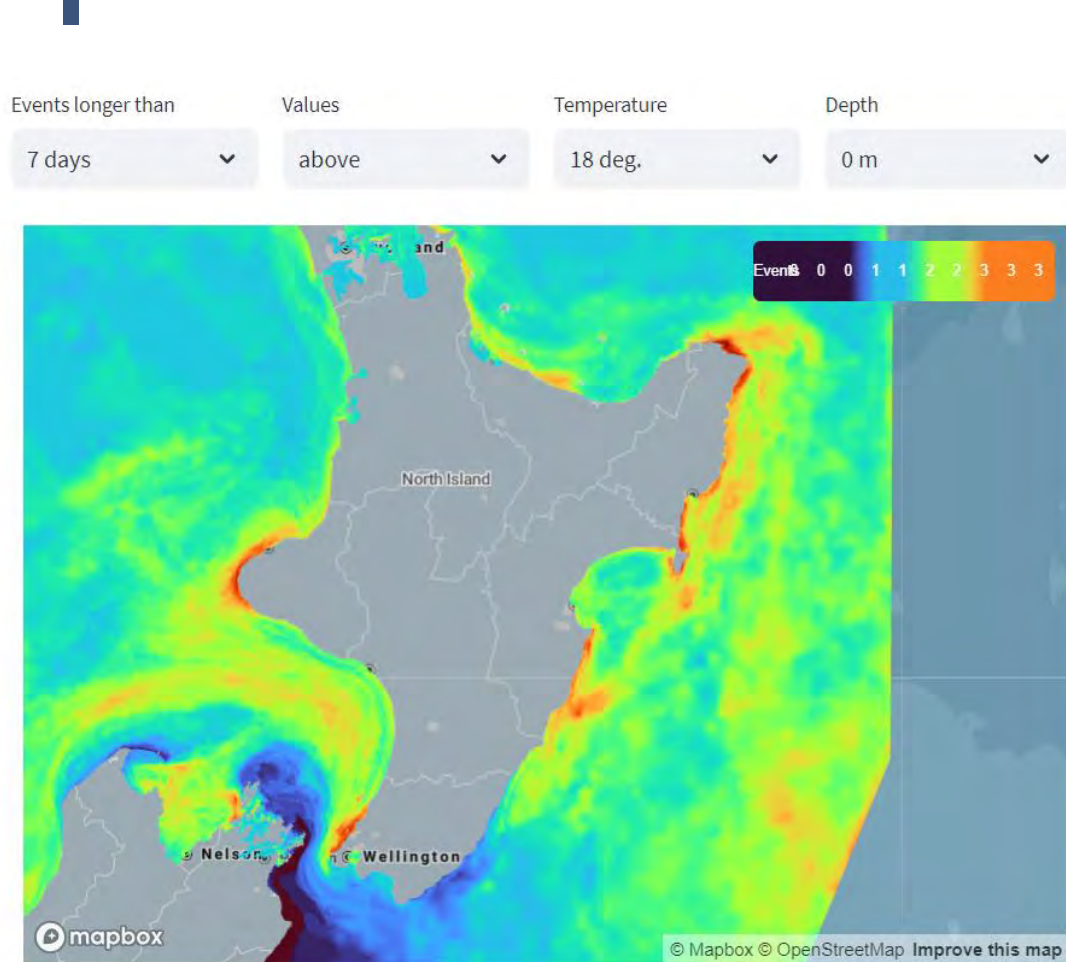

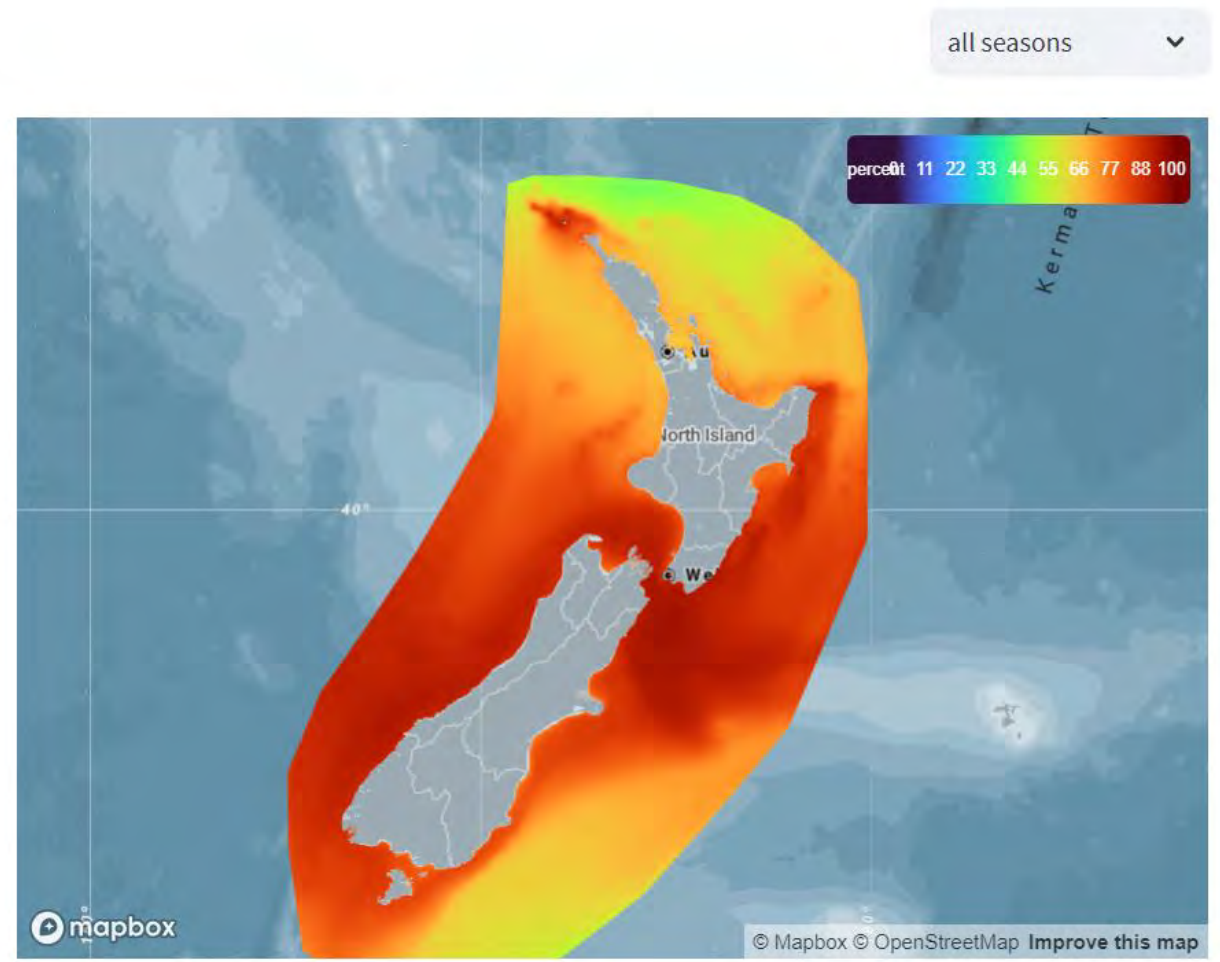

Image credit: Mario Krapp

... asking specific questions of your data

Number of events per year

Salmon growth rate

## ... interrogating huge datasets

The CMIP6 climate projections are massive datasets that feature many different structures and formats.

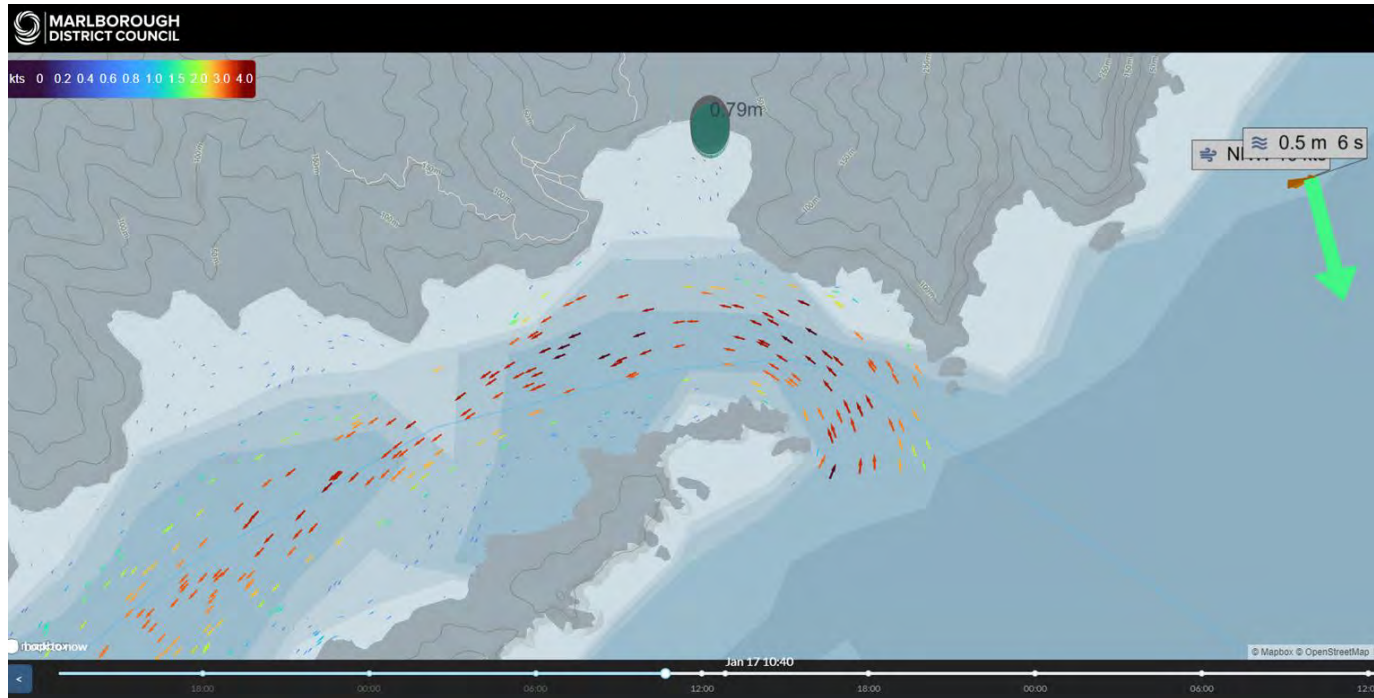

In the Datamesh we can register a selection of those experiments and provide easy access to non-expert users.

Here we present a plot of surface temperature from 4 CO2 emission scenarios (2015-2100), plus the historical period from 1980 to 2015. Created in a few minutes.

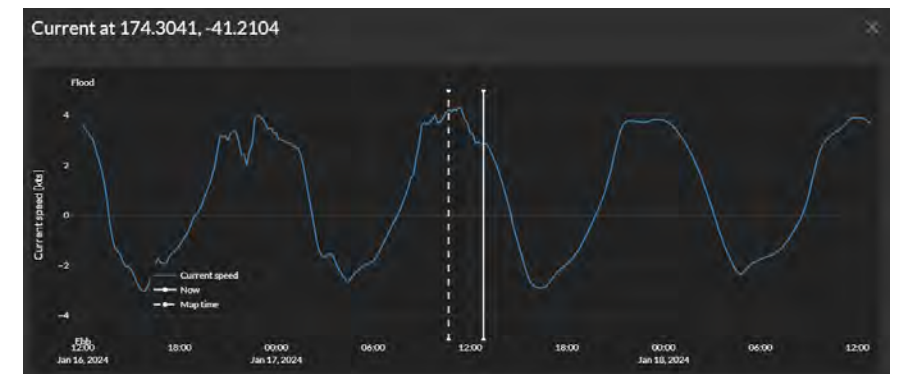

...making real time navigational decisions

The complex tidal and non-tidal flows in the Tory Channel are resolved by a hybrid ML model using real time water level data.

## ...monitoring variables in real time

Users can create their own apps by mixing various datasets.

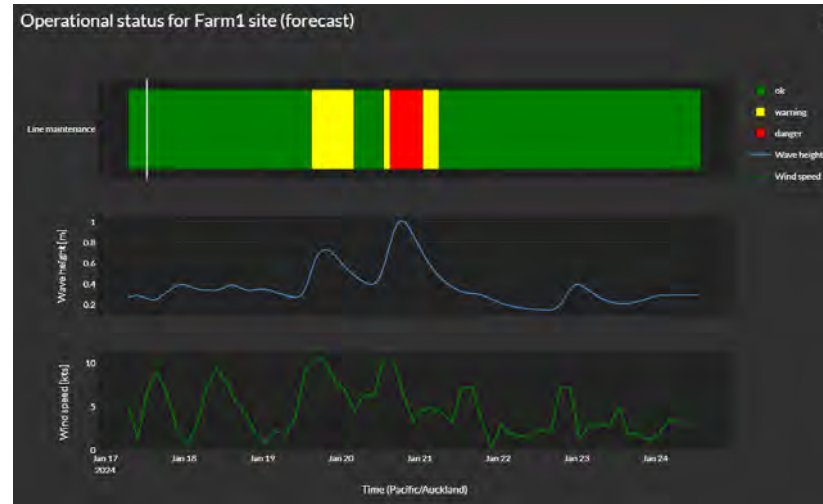

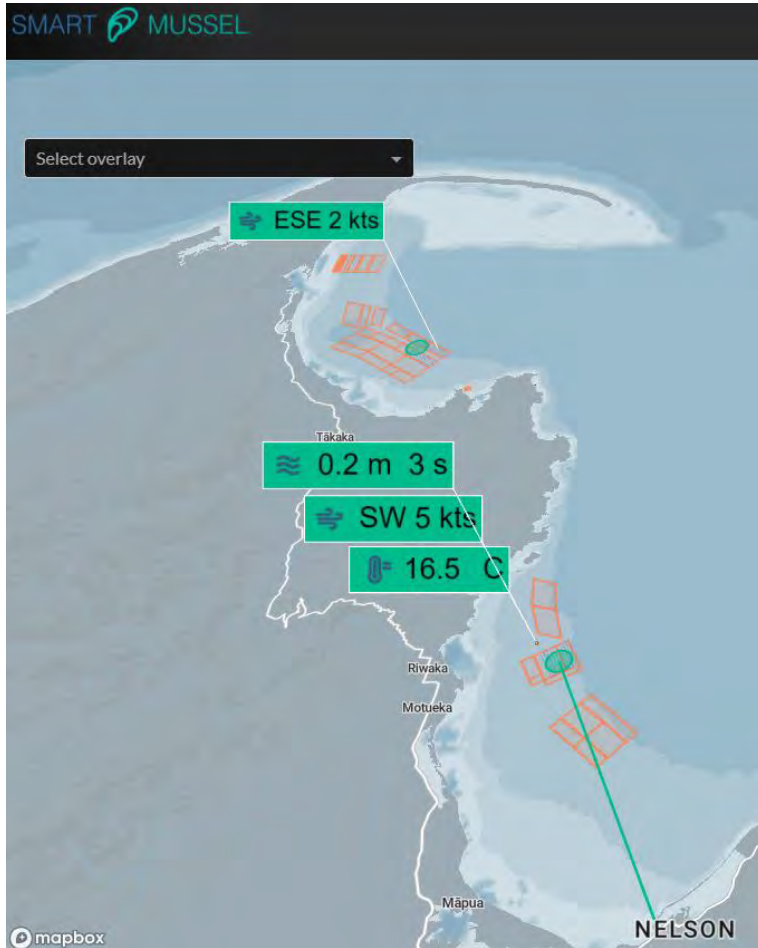

Here, the Auckland Council uses measured, nowcast and forecast wave heights and combine with video observations to monitor beach response to storms.

Credit: Jennifer Montano Munoz

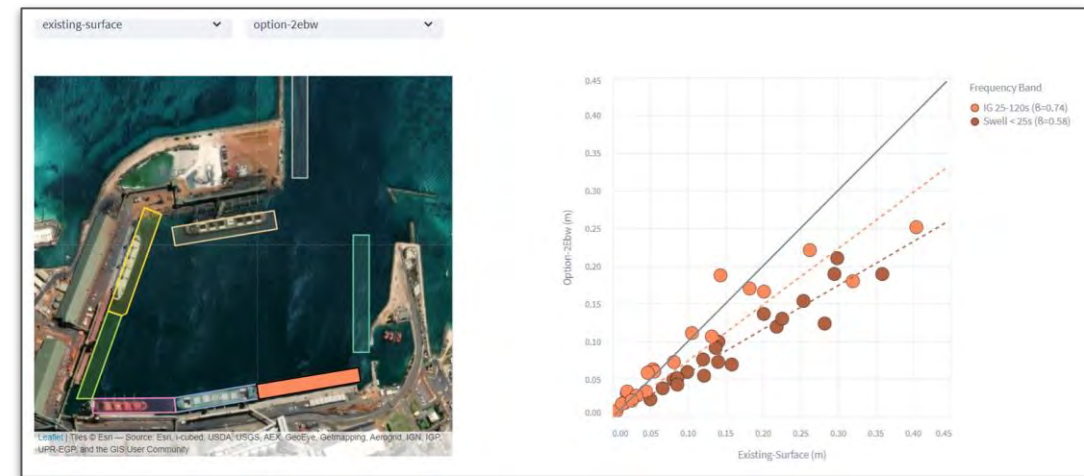

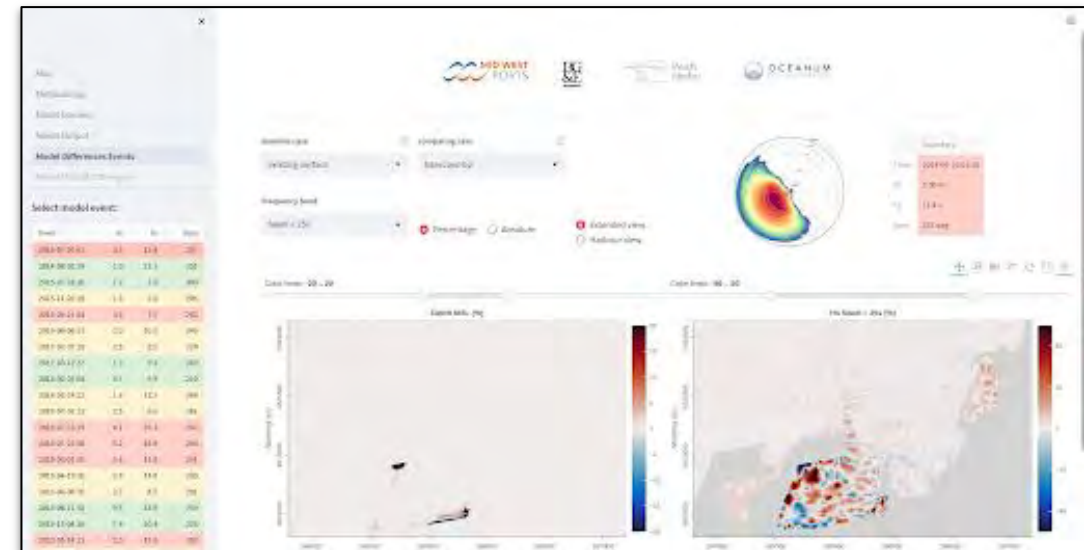

... providing aquaculture with powerful decision-making tools

... using interactive apps to present complex model results

Effects of port modifications on the harbour tranquility can be analysed by the range of stakeholders.

OCEANUM  
OCEAN NUMERICAL

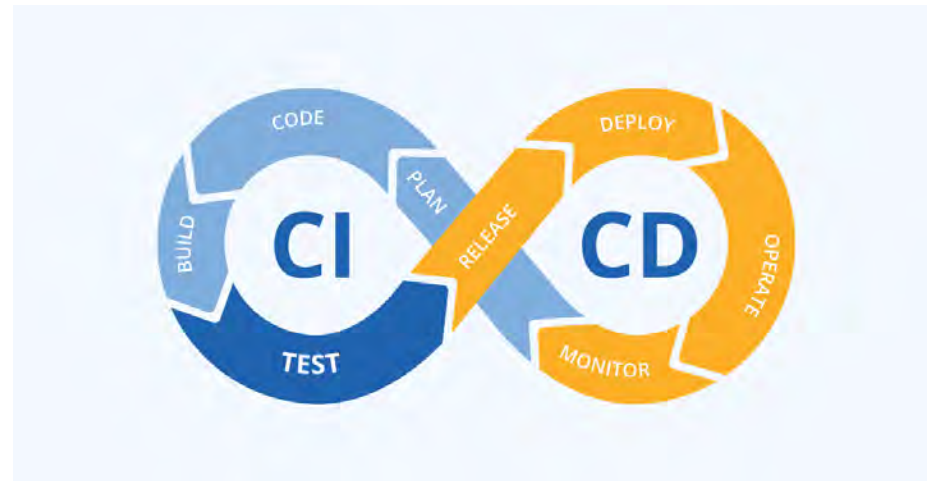

OCEANUM.IO features under development....

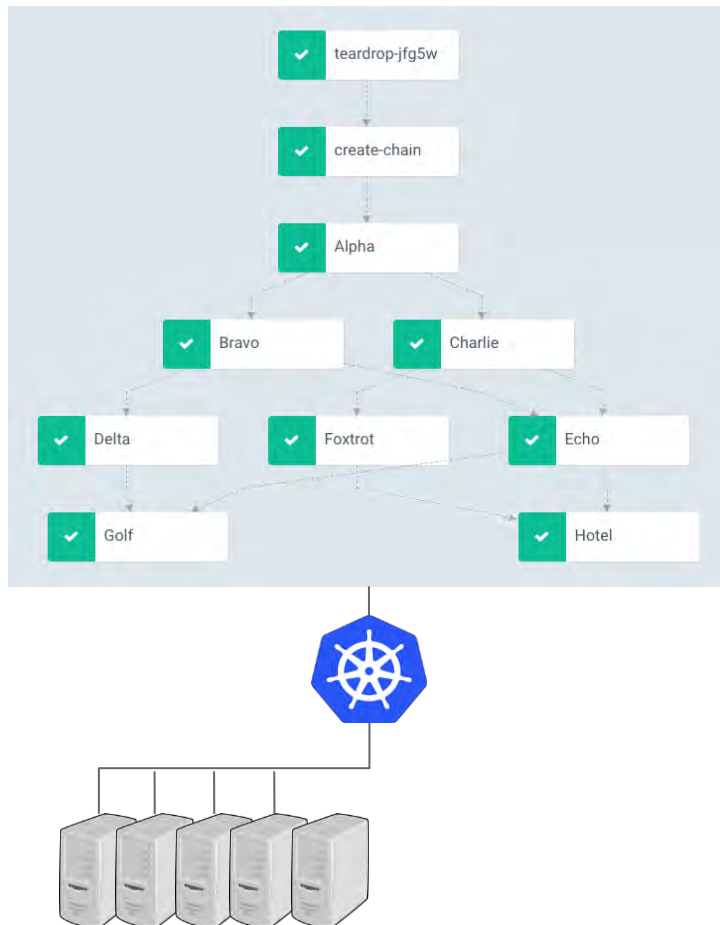

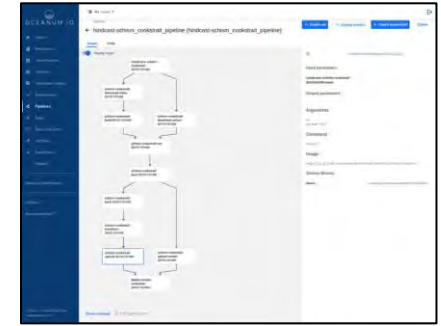

## Third-party app deployment pipelines

- Automated provision, building and deployment of Web Apps and API Web services in the cloud.
- Github and Gitlab push events triggers integration (CI/CD).
- OpenID (Google, Email) and Token access Authentication for APIs.
- App authorization policies (open-access, private and sharing).
- Default URL and Custom Domains and with TSL (HTTPS).
- Multiple deployment stages (test, production, etc.).
- Common App templates for quick bootstrapping of new projects (e.g. Streamlit, EIDOS, Dash, etc.).

# Third-party access to cloud compute

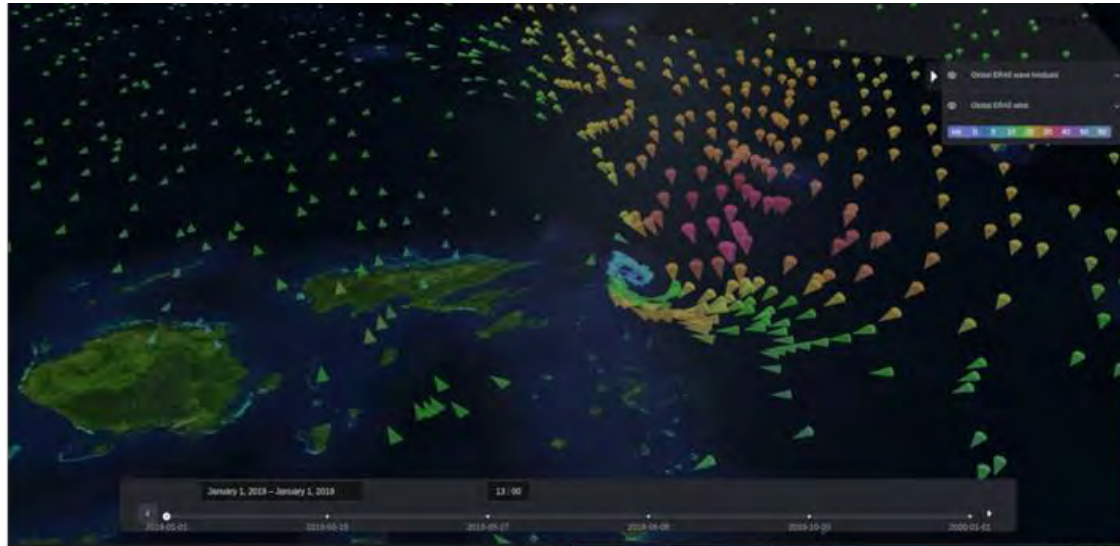

- Cloud-based compute platform for running complex geophysical models and large computational workloads (hindcast, forecast, operational) .
- Using well-established technologies such as Docker and Kubernetes to allow massive scalability in response to user demands.
- Abstracts away the complexity of organising and scaling the compute.
- Simple user interface and command line tools to interact with the platform and visualise the workflows as they run.
- Unleashes the full power of cloud compute, rather than treating the cloud as a 'remote cluster'.
- Boundaries and outputs managed by Datamesh.

# EIDOS (Environmental Interaction and Display Operating System)

An interactive view of data in time and space:

- Standalone or integrated
- Collaborative
- Visualisation for apps
- Digital twins
- Interactive presentations

Renderer operates on a declarative schema

It all starts with access to data...

**context** that  
can only be  
understood by  
humans

**data** that can  
only be read by  
machines

OCEANUM  
OCEAN NUMERICAL

Thanks for your time

<b>Event ID</b>	00eaf11-a28d-654a-3548-d5ed451edc7	<b>Version</b>	1 (Is latest version)
<b>Target species</b>	BAR - Barracouta		
<b>Total estimated catch</b>	880.6 kg	<b>Paired vessel</b>	-
<b>Number of nets</b>	1	<b>Wing spread</b>	15 m
<b>Headline height</b>	3.5 m	<b>Ground rope depth</b>	228 m
<b>Codend mesh size</b>	127 mm	<b>Bottom depth</b>	228 m
<b>Speed</b>	2.8 kn		
<b>NFPS present?</b>	No	<b>Net lost?</b>	No
<b>Fishing under a HSP?</b>	-		
<b>Mitigation devices</b>	Bird baffle - two booms perpendicular to vessel		
<b>Notes</b>			

## Estimated Catch

Species	Est. Green Weight
TAR - Tarakihi	160 kg
STA - Giant stargazer	86 kg
SCH - School shark	54.6 kg

## Positions

		System	Manual
<b>Net at depth</b>	<b>Date</b>	17 Mar 2024 12:06 PM NZT 16 Mar 2024 11:06 PM UTC	
	<b>Latitude</b>	-41.6691	
	<b>Longitude</b>	171.0291	
<b>Net leave depth</b>	<b>Date</b>	17 Mar 2024 04:45 PM NZT 17 Mar 2024 03:45 AM UTC	
	<b>Latitude</b>	-44.0210	
	<b>Longitude</b>	168.8642	

Point locations tell you something happened, they don't tell you exactly where and how it happened!

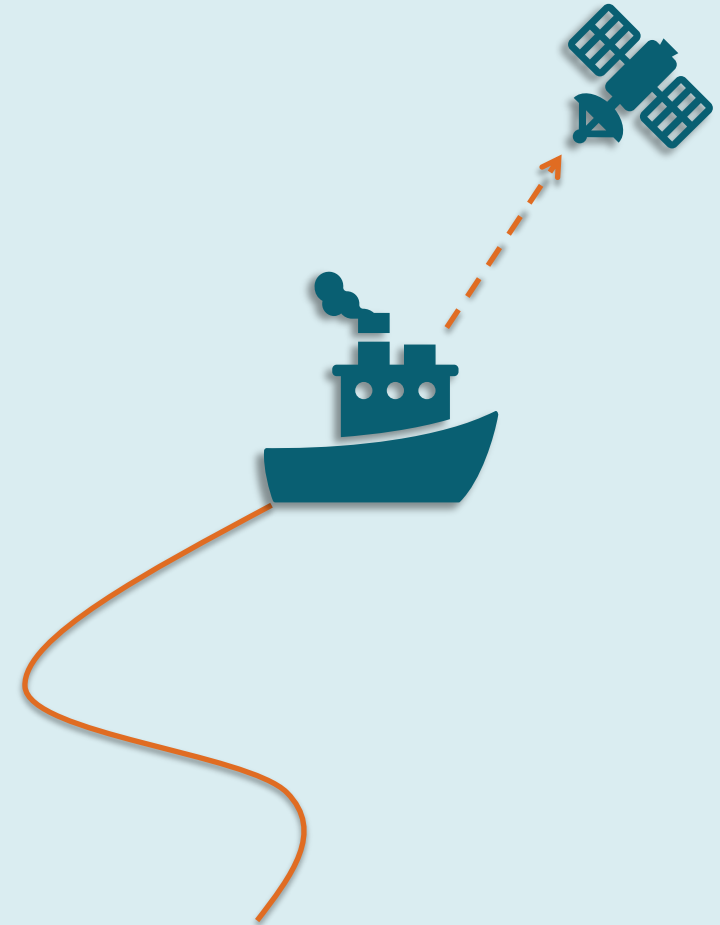

# What other information can we use?

Geospatial Position Reporting (GPR) is an in-house system used to monitor fishing vessels

GPR provides vessel locations at regular intervals (i.e., like AIS)

**Can GPR fill the gaps in fishing effort returns?**

**How do vessel tracks relate to different fishing methods?**

# Mapping Improvement Project

- We looked at every fishing method
- Reviewed the reported information and how that related to the fishing gear
- Developed processes to map the reported details
- Received feedback from the Aquatic Environment Working Group, fishers, FNZ staff

## The standards called for 4 types of geometry

### Track lines

Trawl, Potting, BLL etc.

### Circles

Seining, Mechanical Harvesting etc.

### Surface Longline

### Danish Seine

# Creating Track Lines

# Using speed for data grooming

- Some fishing methods have granular reporting
- Vessel speed can highlight fishing locations
- Speed can be used to remove errors in reported locations

# Track Lines

---

**GPR Fishing tracks**

**Straight line version**

**Potting relative to reefs**

**Fisheries New Zealand**

Tini a Tangaroa

# Key changes over time

Each bar represents a major improvement to our processing scripts

Past examples only processed **trawl** records (**60k events**)

Large complex projects took weeks to complete

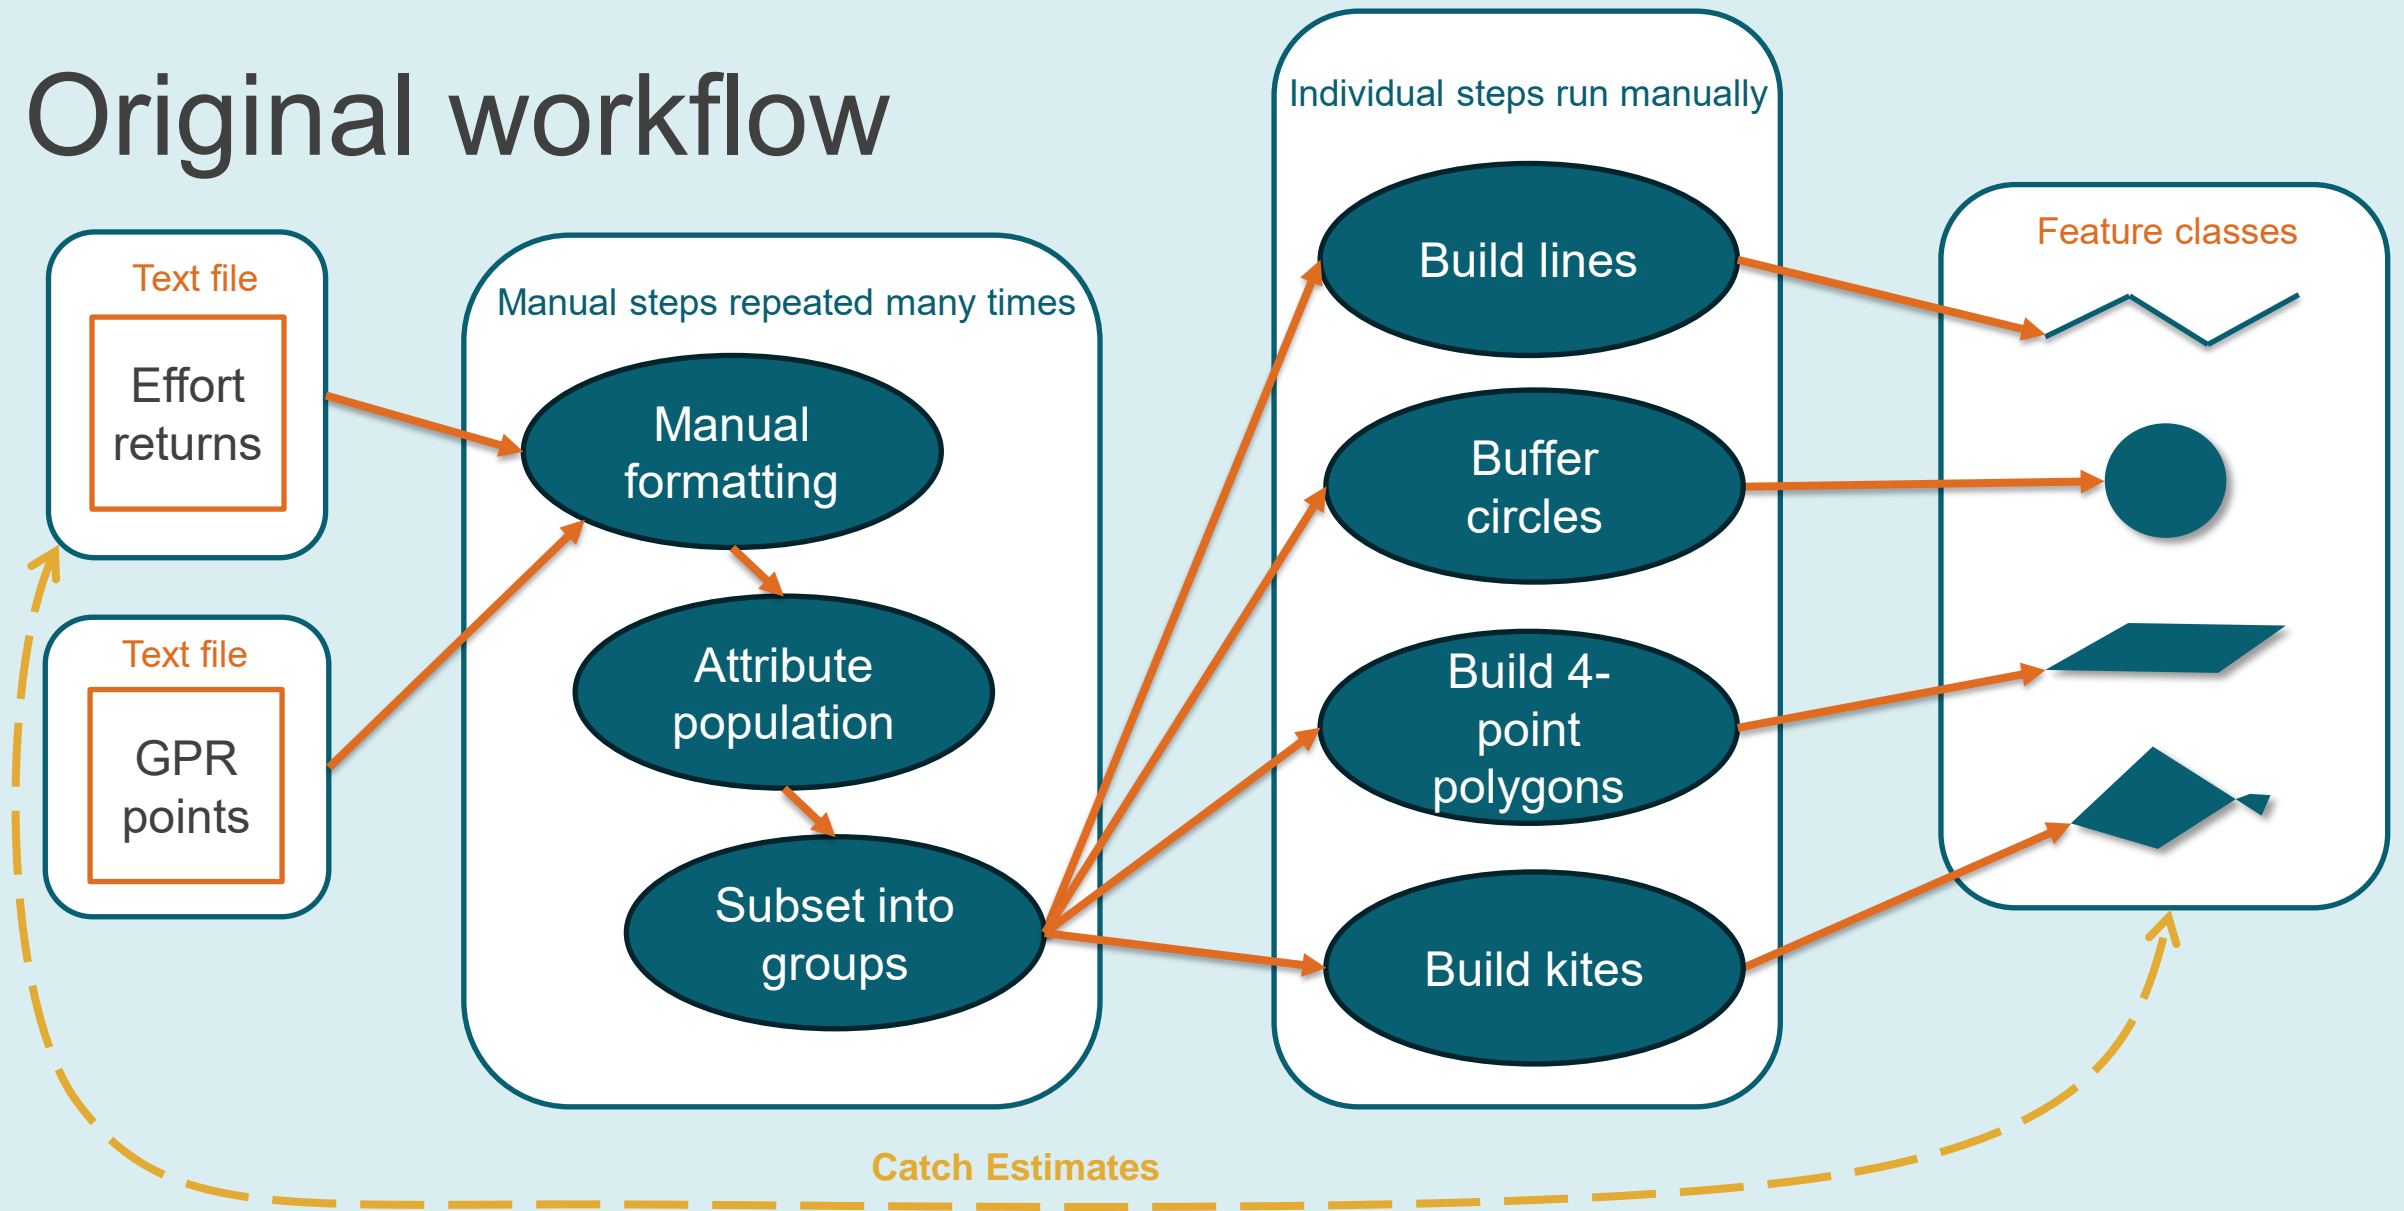

We can now process everything!

**140k** events & **11 million** GPR points; including grooming, joining on timestamps, multiple shape outputs, and everything is formatted for multiple workflows

# Original workflow

# What is pandas?

pandas is a python library for managing tabular data

Provides tools to filter, analyse and join data – like Excel but much faster

Included with ArcGIS Pro – no special installs needed

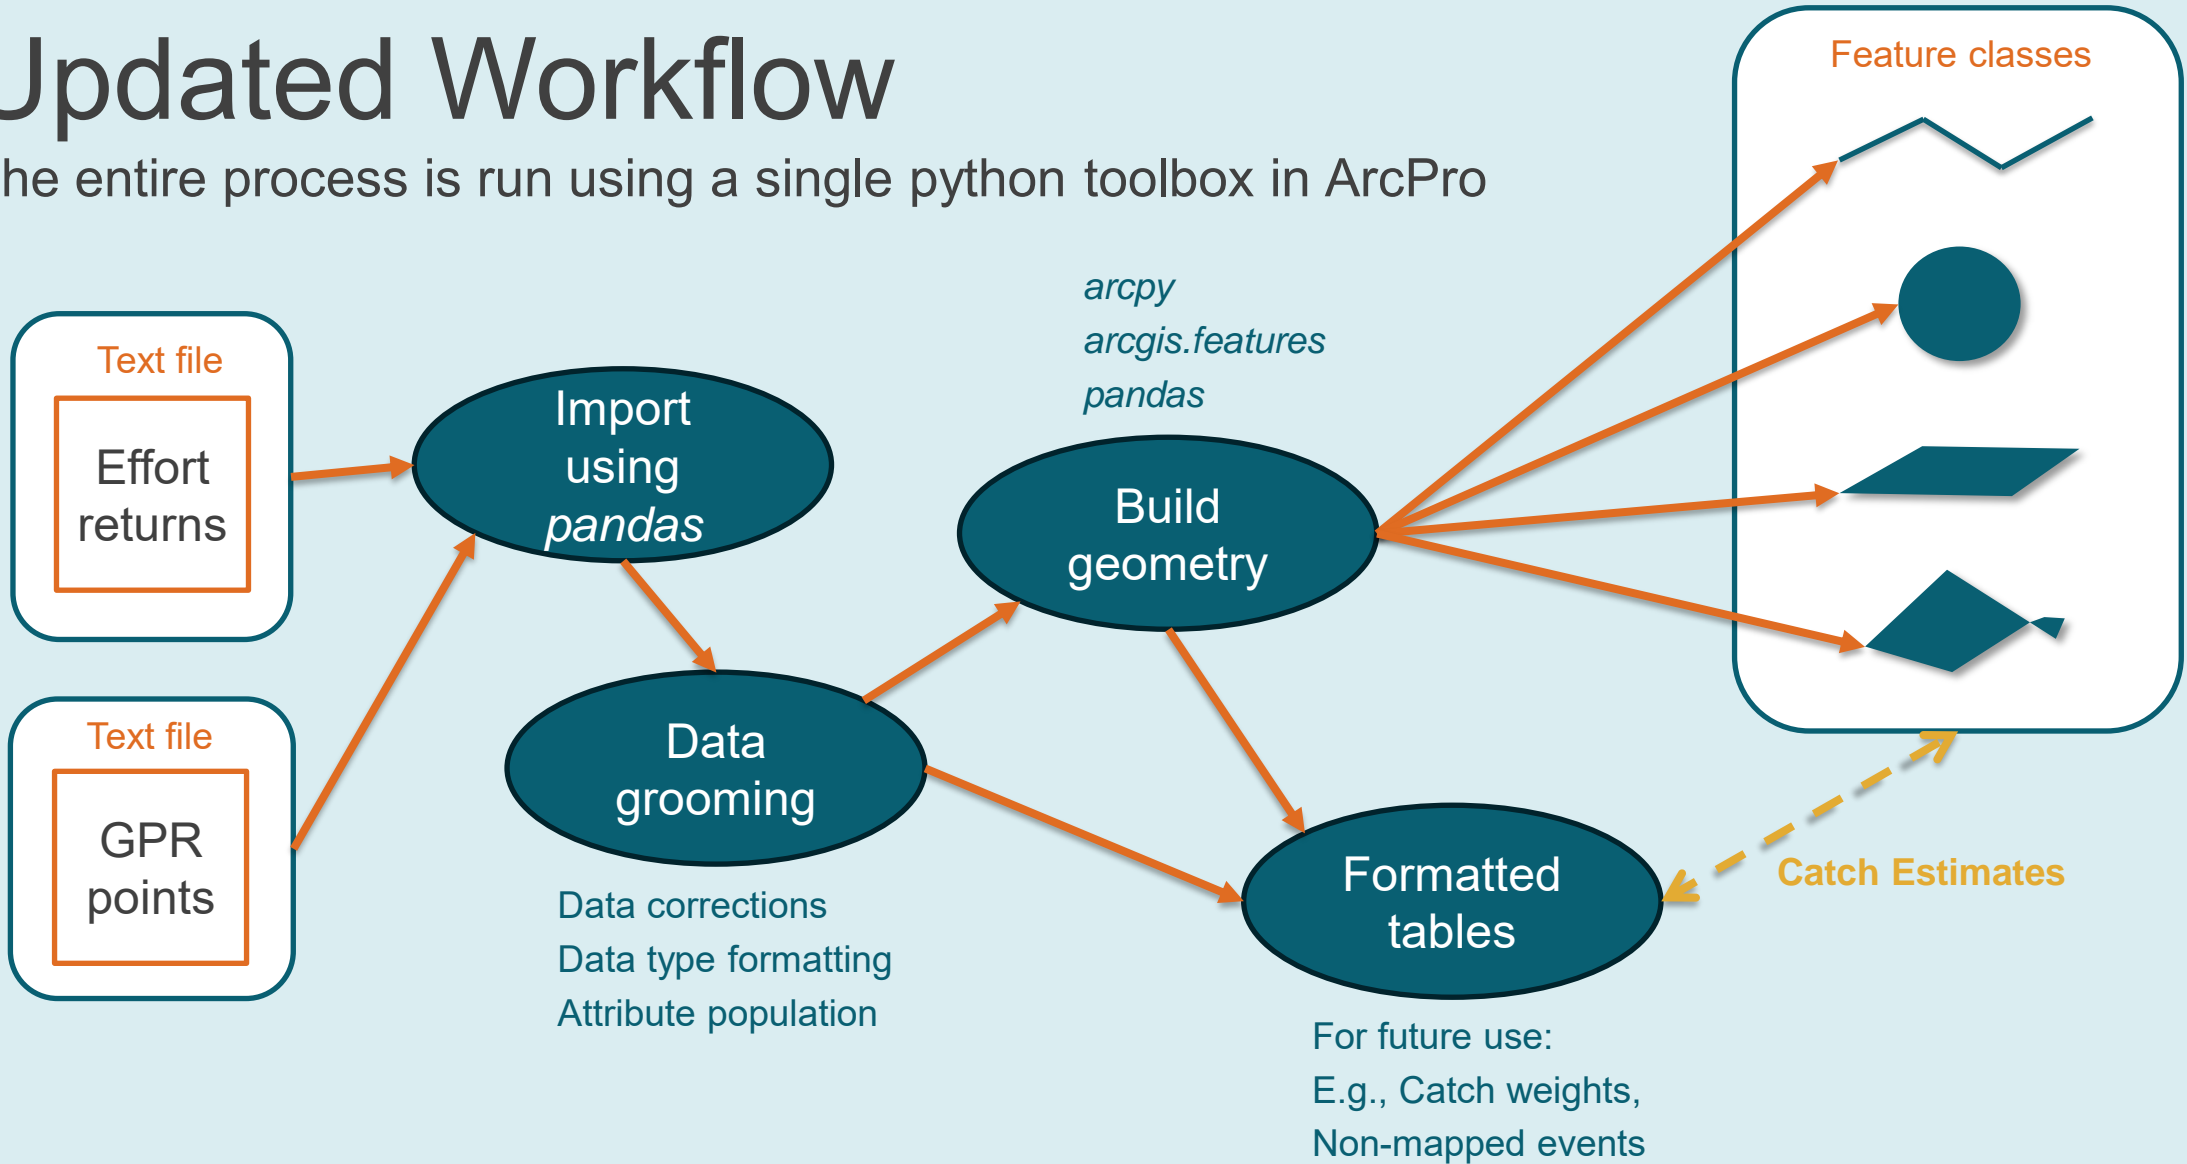

A diagram illustrating the structure of a pandas DataFrame. It shows a table with columns labeled "Name", "Team", "Number", "Position", and "Age". The rows are indexed from 0 to 6. A blue arrow labeled "Columns" points to the column headers. An orange arrow labeled "Rows" points to the row indices. A pink box labeled "Data" highlights a specific cell in the table, "8.0" in the "Number" column for the row with "Jonas Jerebko".

	Name	Team	Number	Position	Age
0	Avery Bradley	Boston Celtics	0.0	PG	25.0
1	John Holland	Boston Celtics	30.0	SG	27.0
2	Jonas Jerebko	Boston Celtics	8.0	PF	29.0
3	Jordan Mickey	Boston Celtics	NaN	PF	21.0
4	Terry Rozier	Boston Celtics	12.0	PG	22.0
5	Jared Sullinger	Boston Celtics	7.0	C	NaN
6	Evan Turner	Boston Celtics	11.0	SG	27.0

# Updated Workflow

The entire process is run using a single python toolbox in ArcPro

# Benefits of the new process

Makes better (and timely) use of the data

Greater certainty of where fishing is occurring

Higher quality advice for decision making

Other possibilities...

- Habitat identification

- Change predictions

- Fisher / environment interactions

# Thank you

Thanks to the Spatial Intelligence-Water Team,  
Fisheries NZ staff, and Rātā Chapman-Olsen

# Electronic Navigational Charts and ArcGIS Maritime Server:

Revealing the potential of the LINZ ENC Service beyond  
navigation

Richard Wells - GEOINT New Zealand, New Zealand Defence Force

John Plunkett - Eagle Technology

April 2024

**EAGLE**  
TECHNOLOGY

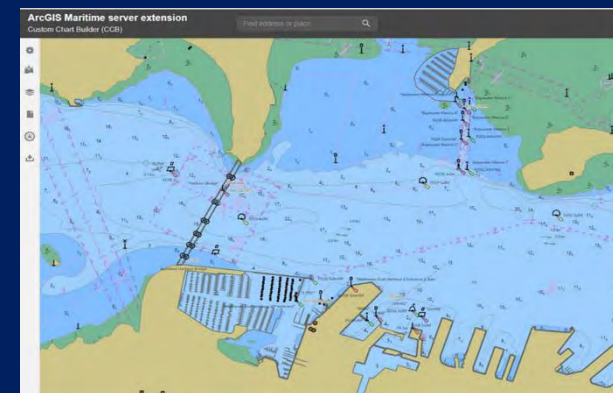

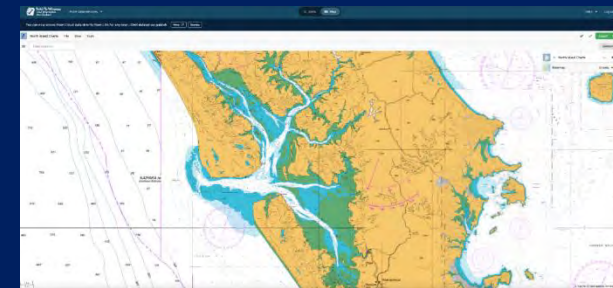

# Electronic Navigational Charts (ENCs) and the LINZ ENC Service

- Introduction and Background: The journey so far
- Hydrographic Charting
  - Background/History  
(first recorded hydrographic charts were produced c. 100 A.D. - *Marinus of Tyre, Greek-speaking Roman Geographer*)
    - Paper - > Raster - > Vector (ENC)
  - Primary Purpose
    - Safety of Navigation at Sea
- Electronic Navigational Charts (ENC)
  - Vector Charts required for Electronic Chart and Display and Information Systems (ECDIS)
  - Since 2011, an ECDIS has been required by International Maritime Organisation (IMO) regulations to be fitted to all large commercial vessels travelling internationally
  - New Zealand Maritime Rules Part 25
  - ENC S-57 standard developed by the IHO (International Hydrographic Organisation)
  - Data Content: Soundings, Contours, Buoys, Beacons, Lights, Coastline etc.
  - 6 x Usage/Scale Bands [Overview (1), General (2), Coastal (3), Approach (4), Harbour (5) Berthing (6)]
  - ENC format: .000 S-57, [S-63 (protection/encryption)]

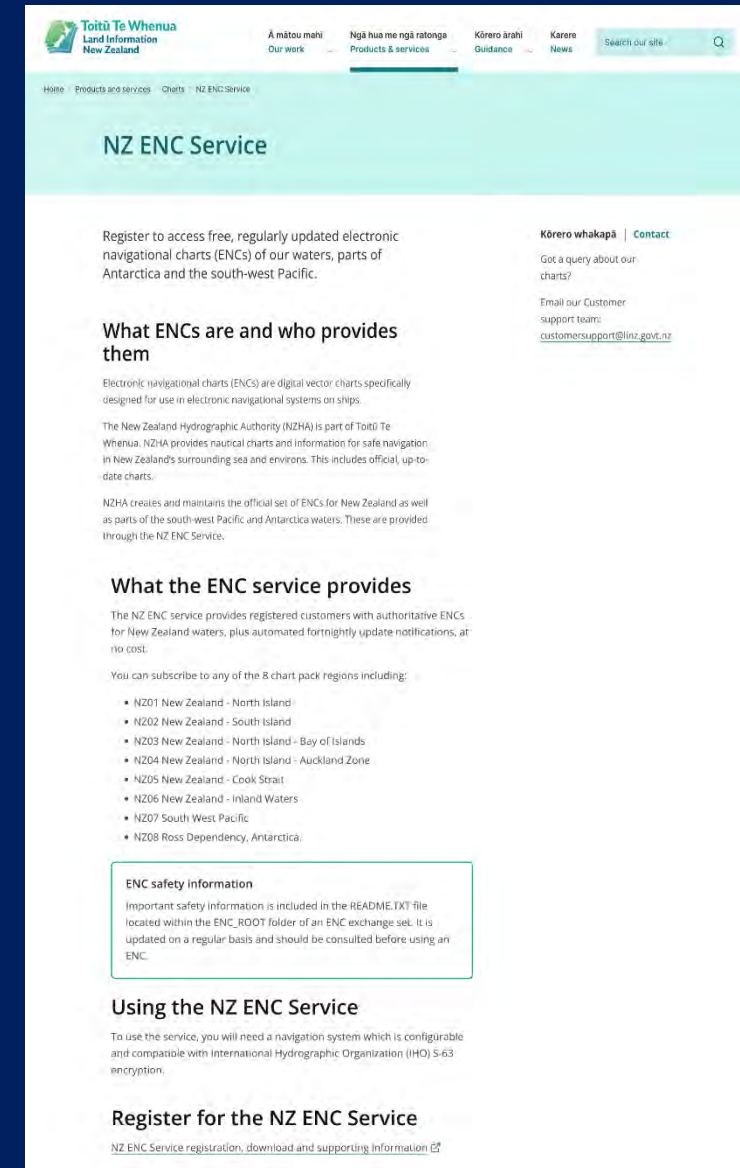

*“Electronic Navigational Charts (ENCs) consist of digitised data conforming to the IHO’s S-57 ENC Product Specification that records all the relevant charted features necessary for safe navigation, such as coastlines, bathymetry, buoys, lights, etc. The basic unit of geographic coverage (analogous to a paper chart) is termed a cell.*

*ENCs are official vector-based electronic charts designed to meet the relevant chart carriage requirements of the Safety of Life At Sea (SOLAS) convention. When displayed within certain parameters, and using a type approved ECDIS, ENCs fully satisfy SOLAS chart carriage requirements, and so can be used as the primary means of navigation.” IHO Publication S-65, Edition 2.1.0, May 2017*

# Electronic Navigational Charts (ENCs) and the LINZ ENC Service

- LINZ ENCs
  - RNZN ENCs (~c.2005-2008) -> adopted by LINZ and became NZ's official ENC portfolio
  - LINZ ENCs made available through Regional ENC Coordinating Centres
- The LINZ ENC Service (launched 2020) – free and publically available service
  - <https://encservice.linz.govt.nz>
  - S-63 Permit
  - Chart Permits
  - Base Disk (6 monthly)
  - Fortnightly updates
- Requires a system that can read S-63 protected ENCs (typically an ECDIS)

The screenshot shows the LINZ ENC Service website. The header includes the LINZ logo and navigation links: 'Home', 'Products and services', 'Charts', and 'NZ ENC Service'. A search bar is located in the top right corner. The main heading is 'NZ ENC Service'. Below this, there is a registration prompt: 'Register to access free, regularly updated electronic navigational charts (ENCs) of our waters, parts of Antarctica and the south-west Pacific.' To the right, there is a 'Kōrero whakapā | Contact' section with links for 'Got a query about our charts?' and 'Email our Customer support team: customersupport@linz.govt.nz'. The 'What ENCs are and who provides them' section explains that ENCs are digital vector charts designed for use in electronic navigational systems on ships. It mentions that the New Zealand Hydrographic Authority (NZHA) is part of Toitū Te Whenua and provides nautical charts for safe navigation. A note states that NZHA creates and maintains the official set of ENCs for New Zealand and parts of the south-west Pacific and Antarctica waters. The 'What the ENC service provides' section states that the service provides registered customers with authoritative ENCs for New Zealand waters, plus automated fortnightly update notifications, at no cost. A list of chart pack regions is provided: NZ01 New Zealand - North Island, NZ02 New Zealand - South Island, NZ03 New Zealand - North Island - Bay of Islands, NZ04 New Zealand - North Island - Auckland Zone, NZ05 New Zealand - Cook Strait, NZ06 New Zealand - Inland Waters, NZ07 South West Pacific, and NZ08 Ross Dependency, Antarctica. An 'ENC safety information' box highlights that important safety information is included in the README.TXT file located within the ENC\_ROOT folder of an ENC exchange set. The 'Using the NZ ENC Service' section notes that users need a navigation system compatible with IHO S-63 encryption. Finally, the 'Register for the NZ ENC Service' section provides a link to 'NZ ENC Service registration, download and supporting information'.

## NZ ENC Service

The New Zealand Hydrographic Authority provides free of charge Electronic Navigational Charts (ENCs) for Mariners. Covering New Zealand, the South West Pacific and Antarctica.

# ArcGIS Maritime Server – LINZ ENC Service Demonstration

Demonstration Link:

<https://jfp1091.cloud.eaglegis.co.nz/portal/apps/mapviewer/index.html?webmap=520d8b81b6c34d4d92729f8933490351>

LINZ Raster Charts Comparison

<https://www.arcgis.com/apps/mapviewer/index.html?webmap=a50e6165d8e34cb486bff2242f261c6e>

Demonstration Content:

- Seamless service (~2-300 ENCs) (multiple scales/usage bands and extents)
- Ease of updating (fortnightly)
- Symbology – INT1 and S-52
- Layer effects – turning on/off features and applying transparency
- Comparison with Raster Charts
- Integration with other data:
  - Bathymetry
  - Imagery
  - Boundaries
  - Infrastructure
- Custom Chart Builder

# Advantages of the ENC Maritime Chart Service

- **Currency of the data**

- The data is updated fortnightly with Notices to Mariners by LINZ. The raster chart (image) data available from the LINZ Data Service is updated only periodically. NZMariner Raster navigational chart products have been sunsetted

- **Coverage**

- It provides current coverage for all areas where LINZ is the Primary Charting Authority (including Ross Dependency and many SW Pacific Islands)

- **Clarity**

- Vector data is able to be displayed at multiple scales (rather than raster chart products, which only lend themselves to particular scales)

- **Symbology**

- S-52 or INT1 (paper-chart-like) symbology options

- **Data Consistency across the Maritime Community**

- The data is identical to that being used by the Maritime Navigation Community on board commercial vessels with display being very similar to that on a ship's ECDIS using S-52 symbology.

- **Layer control**

- Enables layers to be turned on/off dynamically

- **Data Integration**

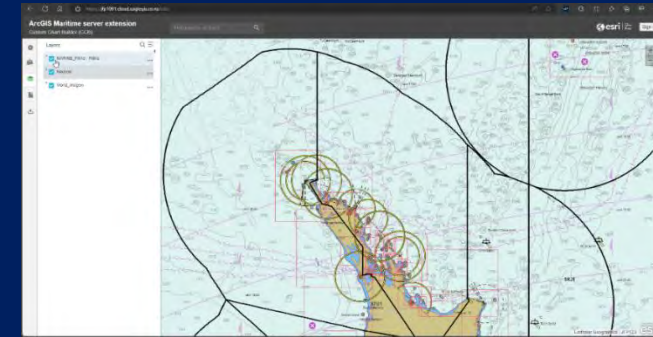

- Ability to integrate vector features with other datasets more easily than a raster backdrop (ability to pick and choose layers to display, query features, etc.).

- **S-100 Support**

- The service can be updated to incorporate new developments in IHO charting standards (e.g. the S-100 family of hydrographic products, which are due for release from 2026). Esri ArcGIS Maritime Supports S-100.

# Potential Use Cases of a LINZ ENC Maritime Chart Service

- Integrating with AIS Data – providing situational awareness
- Integrating with overlays such as:
  - Maritime Boundaries
  - MNZ Operating Limits
  - NABIS (National Aquatic Biodiversity information System)
    - Fisheries Management Areas
    - Conservation Areas
    - Customary Rights
- Integration with Bathymetric Data
- Integration with Imagery
  - For infrastructure – e.g. Ports
  - For Coastal Bars to highlight hydrographic features with sand-bar locations (e.g. to help illustrate and educate recreational boat users)
- Facilities and infrastructure management
  - Ports, Undersea Cables, Pipelines, Offshore Wind-farms
- Exploration

# Conclusion

- **Aim has been to demonstrate the potential of the LINZ ENC Service for use in applications beyond navigation**
- The Pilot Study has combined:
  - LINZ ENC Service: Mature, Comprehensive, Authoritative National Hydrographic Dataset, which is updated fortnightly
  - Esri ArcGIS Maritime Server: Mature and well-proven technology (as used by NOAA (~2015) and UKHO (2019))
- **Where next?:**
  - GNZ – is evaluating implementing ArcGIS Maritime Server on NZDF networks, for planning and situational awareness applications: Integrating National (LINZ) ENCs, International ENCs, Maritime Boundaries, AIS, Additional Military Layers (AMLs), Exercise Areas
- Raising awareness of the potential of the LINZ ENC Service being published online as a National Maritime Base Map service to:
  - All of Government organisations e.g.
    - LINZ
    - Maritime New Zealand
    - National Maritime Coordination Centre (e.g. as a maritime base layer for the proposed Data Fusion System (DFS))
      - (DoC, NZP, Customs, EPA, MPI, MBIE, MNZ, NZDF)
  - The broader maritime community (MGI WG)
- Collating feedback and providing it to LINZ to shape further discussions on options for the provision of a National Maritime Base Map

# Feedback

- Please provide feedback to:

# Additional Slides

**Electronic Navigational Charts and ArcGIS Maritime Server:** Revealing the potential of the LINZ ENC Service beyond navigation

## **Abstract:**

*Electronic Chart Display and Information Systems (ECDIS) and Electronic Navigational Charts (ENCs) have been used for Maritime Navigation for over two decades and since 2011, it has been mandatory for all new large vessels to be fitted with ECDIS under the International Maritime Organisation's International Convention for the Safety of Life at Sea (SOLAS) regulations. GNZ has been supplying National and International ENCs to the Royal New Zealand Navy for navigation purposes for almost 20 years, but due to the S-63 data protection (encryption) used in these products, their use has largely been limited to navigation systems rather than "Situational Awareness" and GIS applications.*

*In 2020, LINZ released its National ENC Service, providing freely available (but protected) S-63 ENC-data for navigational use. Prior to this, LINZ's ENCs were available for navigation only through Regional ENC Coordinating Centres (RENCs) for a licencing fee.\* LINZ is one of only a very few hydrographic organisations to provide their ENCs openly at no cost, and the introduction of the service prompted GNZ to re-visit the wider use of ENC datasets beyond navigation and explore software solutions for consuming and serving ENCs. In 2023, discussions were held between GNZ, Eagle Technology and Esri to explore Esri's Maritime Server (which has successfully been used by NOAA for 5-10 years and more recently by UKHO) for this purpose and a demonstration site with the LINZ ENCs has subsequently been established by Eagle Technology.*

*The benefits to the wider maritime community of having LINZ's ENC data available and published online as a service, include access to current authoritative vector hydrographic charting (updated fortnightly), symbolisation with either S-52 or INT1 symbology and the ability to readily query hydrographic features and integrate ENCs with other maritime-related datasets in a much more seamless and versatile way than is possible with Raster Hydrographic Charts.*

*(\* it should be noted that the unencrypted un-symbolised ENC source data layers were already individually available through the LINZ Data Service and unencrypted S-57 ENCs could be made available by LINZ to organisations on request – both for non-navigational use)*

# ArcGIS Maritime Server Capability Overview

- ArcGIS Server Architecture
- Loading LINZ ENC data and adding chart updates
- Stopping and starting the service
- Publishing standards (REST, WMS, ArcGIS Online)
- S-57, S-63 support (Future S-101, S-102)
- S-52 Symbology and INT1 Paper Chart-like symbology
- WebApps – Custom Chart Builder – creating pdfs from the web
- Integration with other datasets:
  - Imagery, AIS, Maritime Boundaries, Additional Military Areas – e.g. exercise areas
  - Bathymetry Information Systems (e.g. Esri service, LINZ Data Service)
- Consuming Services (ArcGIS Maritime Service & WMS) in ArcGIS Pro
- Combining Services (ArcGIS Maritime Service & WMS) in ArcGIS Online
- Creating MCS Tile Packages for use offline

# ArcGIS Maritime Server – ENC Service Setup Overview

- Loading LINZ ENC Data
- Acquire User Permit file from Esri ([maritime@esri.com](mailto:maritime@esri.com))
- Register with NZENC Service – providing the above user\_permit file
- Download ENC Charts – Base + Latest Cumulative Update
- Place ENC Data, Updates, Permit files in appropriate directories
- If autocellupdate is set to false – stop and restart maritime service to see updated charts
- Fortnightly updates – notification via email to download

A screenshot of a Windows File Explorer window showing a directory with three items. The window title bar indicates the path is 'C:\Program Files\Esri\ArcGIS Maritime Server\'. The items are listed in a table with columns for Name, Date modified, Type, and Size.

Name	Date modified	Type	Size
NZENC WK2024-03 BASE	2/1/2024 1:51 PM	File folder	
NZENC WK2024-15 CUMULATIVE	4/15/2024 7:44 AM	File folder	
PERMIT.TXT	4/15/2024 7:44 AM	Text Document	25 KB

# ENC Updates

- Fortnightly updates
- Including Temporary and Preliminary Notices to Mariners

NZ 36/24 NEW ZEALAND - North Island - East Coast - Tāmaki Strait. ODAS buoy

# ENC Symbology

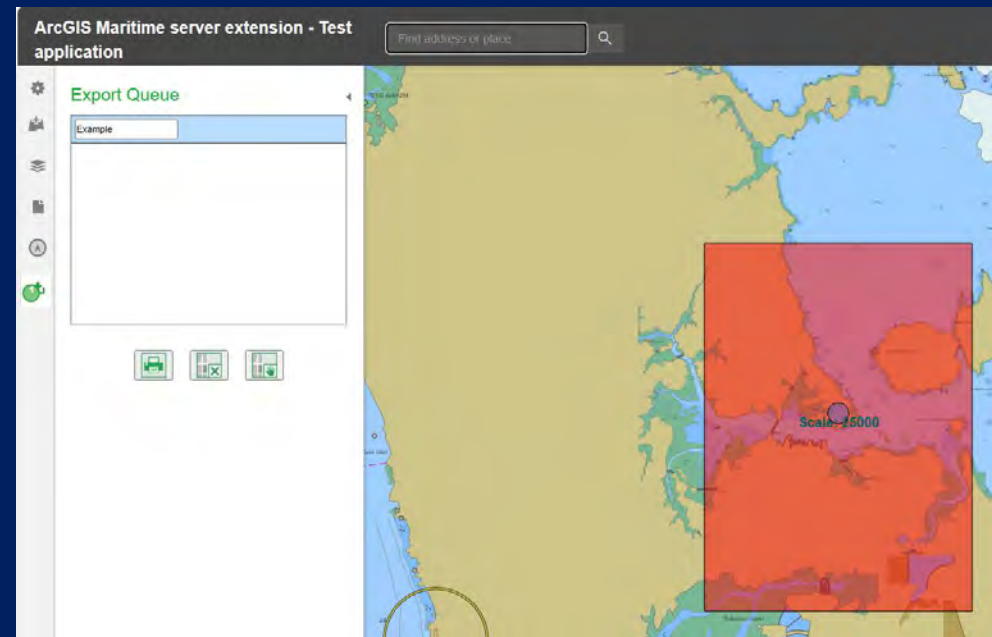

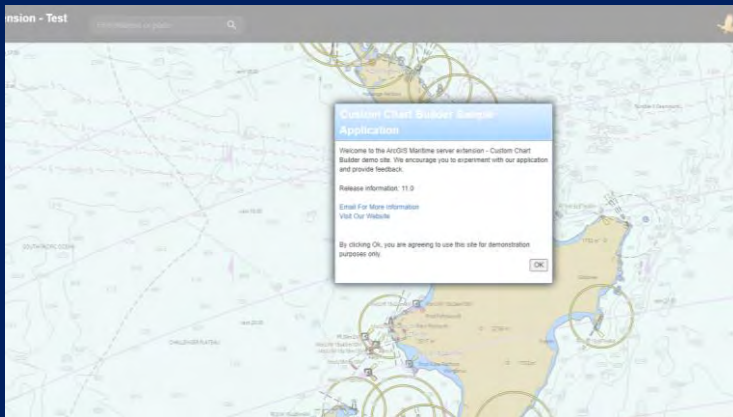

- S-52
- International Hydrographic Organisation Chart 1 (INT1) Paper Chart-like symbology

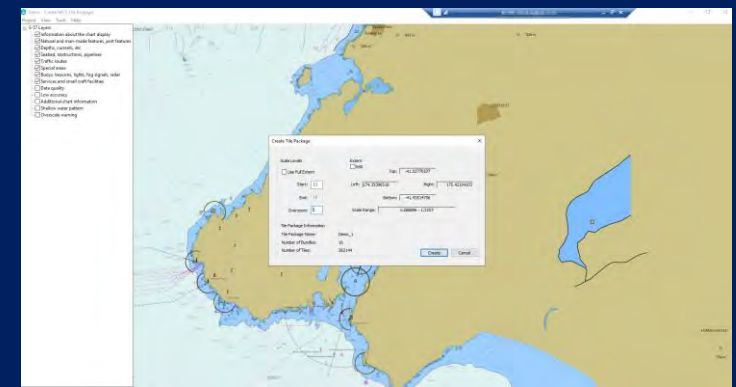

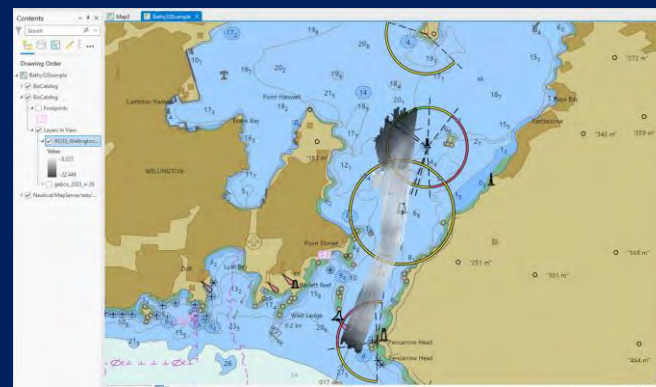

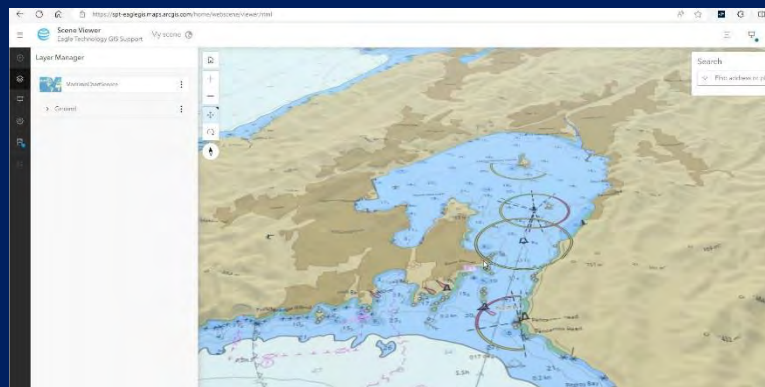

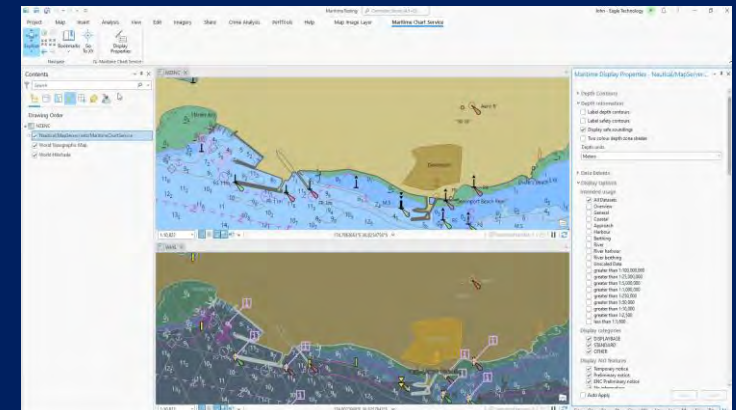

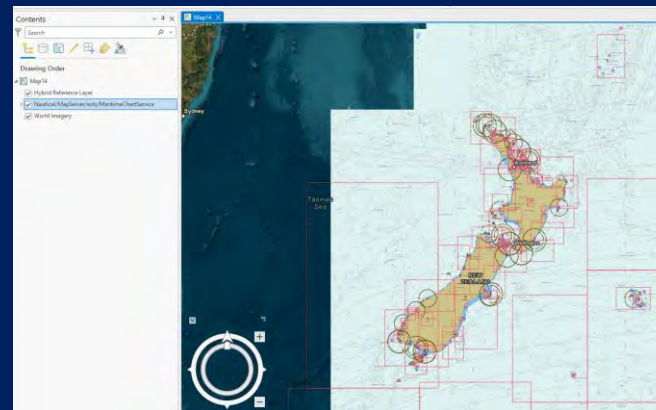

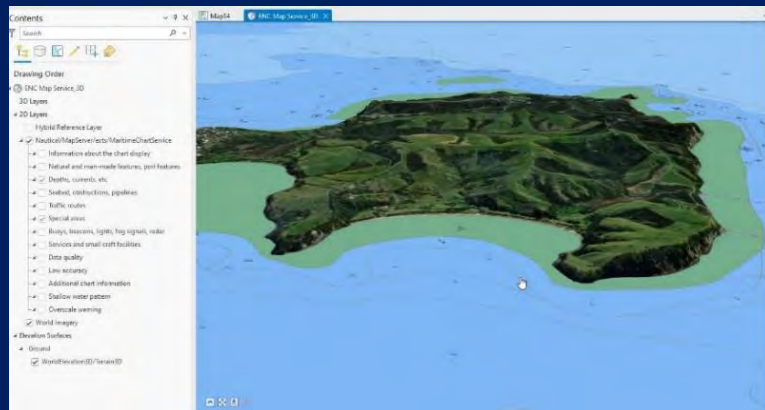

# Custom Chart Builder

- View ENC Data
- Add other ArcGIS Services
- Create PDF of Charts

# Maritime Chart Server - GIS integration

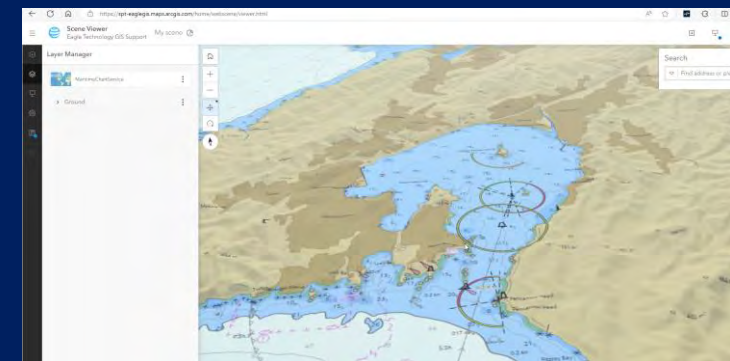

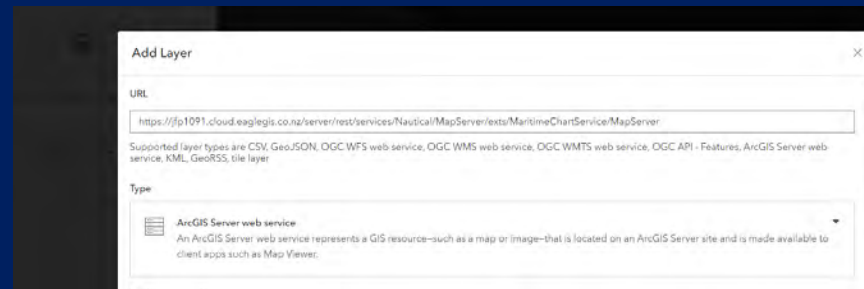

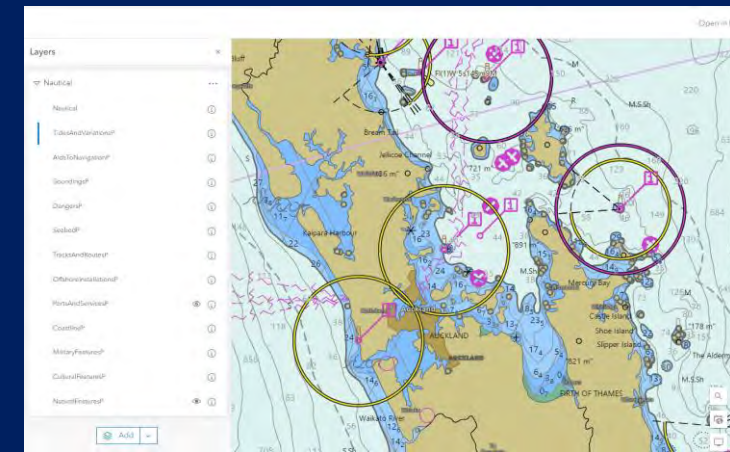

- Adding a Maritime Chart Service into:
  - ArcGIS Pro
  - ArcGIS Pro 3D Scene

# Maritime Chart Server - GIS integration (cont.)

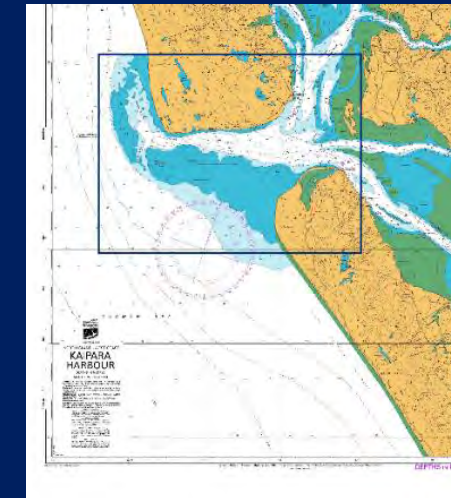

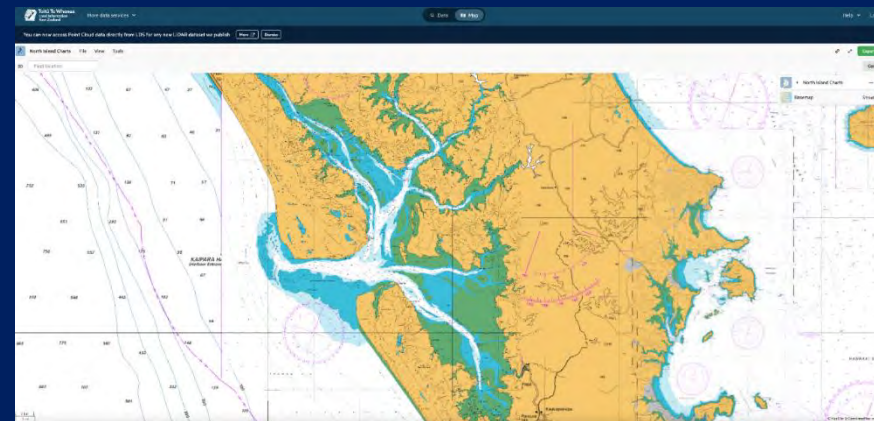

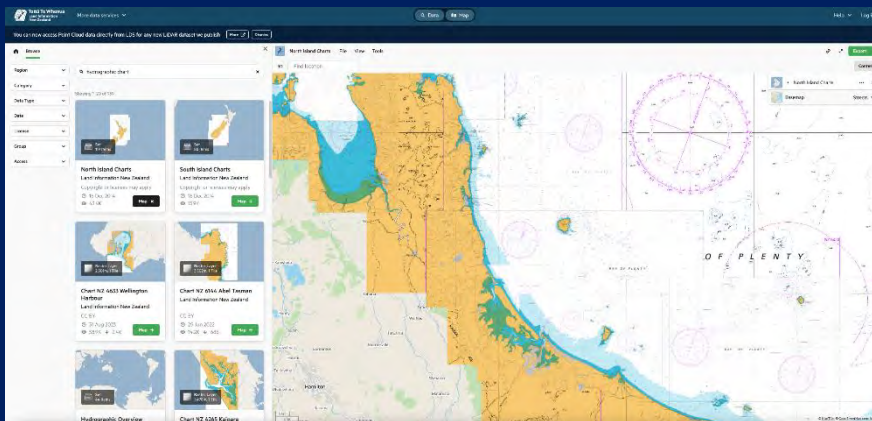

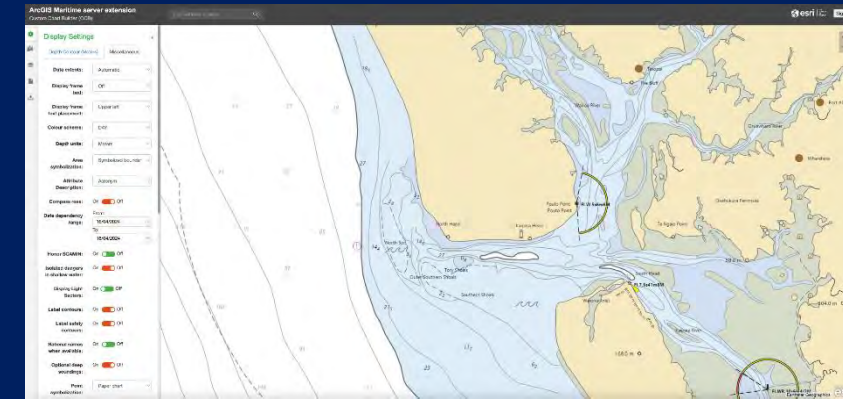

- ArcGIS Online
  - Consume Maritime Service (MapServer or WMS)
  - ArcGIS Online Map Viewer
- Maritime Services (REST/WMS)
- ArcGIS Online 3D Scene Viewer

- The Maritime Chart Service Tile Package, or mcstp.exe, is a stand-alone extension to Maritime Chart Service capabilities, which you can enable for a map service.
- Create a tile package that can be deployed and taken offline
- This design allows you to either leverage existing map services with Maritime Chart Service enabled or create individual Maritime Chart Service projects to manage your tile packages.

# Vector and Raster Comparison

- ENC Vector Chart Service:
  - Layer Control
  - Transparency
  - Integration with other datasets
  - Seamless extent as pan and zoom between chart extents and usage-bands
  - Dynamic Symbology choices (S-52 & INT1)
- Raster comparison
  - NZ Mariner now “Sunsetted”, Geotiffs on LDS have lower update frequency
  - Raster “patchwork” appearance due to irregular chart extents and scales
  - Very little control over appearance of the data
- <https://data.linz.govt.nz/data/?q=hydrographic+chart>

# Chart Viewer Generic Features (NOAA)

- The Demonstration of the LINZ ENC Service is similar to (and can be integrated with) NOAA's ENC Chart Viewer which has been available for over 5 years (providing coverage for all of NOAA's Charting Authority Areas, including parts of the SW Pacific):
- <https://nauticalcharts.noaa.gov/enonline/enonline.html>
- REST service:
- <https://gis.charttools.noaa.gov/arcgis/rest/services/MCS/ENCOOnline/MapServer/exts/MaritimeChartService>

# Chart Viewer Generic Features (NOAA)

## NOAA ENC Chart Viewer Generic features

- Displays data using S-52 presentation library specification edition 3.4.
- Provides indexing for the S-57 attribute object name
- Provides access to S-57 attribute information
- Links external files to S-57 attributes
- Allows for the best scale data to be displayed similar to how an Electronic Chart Display and Information System displays best scale data based on the map scale as a user zooms in and out of the display

## Web application features

- Search service by object name (OBJNAM), national object name (NOBJNM) and dataset names
- Identify features and display their attributes in a pick list
- Zoom to selected features
- Change basemaps
- Measure area and distance, get coordinates
- Set safety, shallow and deep depth contours
- Switch between simplified and traditional symbols
- Display light sectors, safe soundings
- Displays feature symbology based on date dependency range
- Change the background colours of the display
- Turn off certain features or adjust transparency

W [www.linz.govt.nz](http://www.linz.govt.nz)

6 December 2022.

Dear

### Request to collect bathymetric data whilst transiting New Zealand's EEZ

Toitū Te Whenua Land Information New Zealand (LINZ) understands that the **<ENTER VESSEL NAME>** may, from time to time, undertake voyages that include **transits of New Zealand's Exclusive Economic Zone**.

LINZ has been authorised by NZ's Ministry of Foreign Affairs and Trade (MFAT) to request vessels to:

- activate their seafloor mapping systems whilst transiting NZ's EEZ, and
- subsequently transmit the data to LINZ.

MFAT has confirmed that a **marine science research (MSR) application is not required** for such activities undertaken at LINZ's request, whilst noting that this waiver does not give away any of New Zealand's existing rights in relation to MSR under UNCLOS.

Data received will be used for the sole purpose of increasing the coverage of the GEBCO grid within NZ's EEZ; the data will not be used for navigation purposes.

LINZ affirms that any data collected on a 'best endeavours' basis will be accepted and treated accordingly, and that the supplying agency will not be held liable for any consequences arising from the the quality of such data.

In the first instance I ask that you contact our MSR Coordinator at [MSR-NZ@linz.govt.nz](mailto:MSR-NZ@linz.govt.nz) to assist us to understand your schedule, and facilitate delivery of the transit data to LINZ.

Please also note that this request is not voyage-specific; it applies to any expeditions undertaken by the above-named vessel during transits of NZ's EEZ.

We look forward to receiving your co-operation to enhance our understanding of the nature of the seafloor within NZ's EEZ.

Yours sincerely

Adam Greenland, National Hydrographer

# International Convention for the Safety of Life at Sea (SOLAS), 1974

[Home](#) → [About IMO](#) → [Conventions](#) → International Convention for the Safety of Life at Sea (SOLAS), 1974

**Adoption: 1 November 1974; Entry into force: 25 May 1980**

The SOLAS Convention in its successive forms is generally regarded as the most important of all international treaties concerning the safety of merchant ships. The first version was adopted in 1914, in response to the Titanic disaster, the second in 1929, the third in 1948, and the fourth in 1960. The 1974 version includes the tacit acceptance procedure - which provides that an amendment shall enter into force on a specified date unless, before that date, objections to the amendment are received from an agreed number of Parties.

As a result the 1974 Convention has been updated and amended on numerous occasions. The Convention in force today is sometimes referred to as SOLAS, 1974, as amended.

# Mapping Aotearoa's Seafloor

A visual demonstration of Toitū Te Whenua LINZ's seafloor mapping programme

## Where would you like data collected?\*

I have a shapefile of my area(s)

I want to draw my area on a map

## Area of interest - upload a shapefile

Drag and drop your shapefile (zip) of the area(s).

Drop file here or select file (zip)

## Datasets of interest

For typical LINZ seafloor mapping surveys, the following datasets are collected:

- bathymetry (depths)
- seafloor backscatter
- water column backscatter
- sound velocity profiles
- seafloor samples

Tell us of any other datasets you may be interested in below.

1000

## Where would you like data collected?\*

I have a shapefile of my area(s)

I want to draw my area on a map

## Area of interest - draw on the map below

Zoom in and draw a polygon of your area using the polygon button to the right of the map.

To finish drawing, either click the check mark or double click on the last point.

An update on LINZ's 3D Coastal Mapping Project

**Brad Cooper**

Mātanga Tātai Wāhi Matua / Senior Geospatial Specialist

11-April-2024

# Mapping NZ 2025

## Our vision

Seamless mapping across the land and seabed for integrated datasets and improved modelling

Our SouthPAN initiative in collaboration with Geoscience Australia will improve the accuracy and reliability of satellite-based positioning systems from 10m to as little as 10cm.

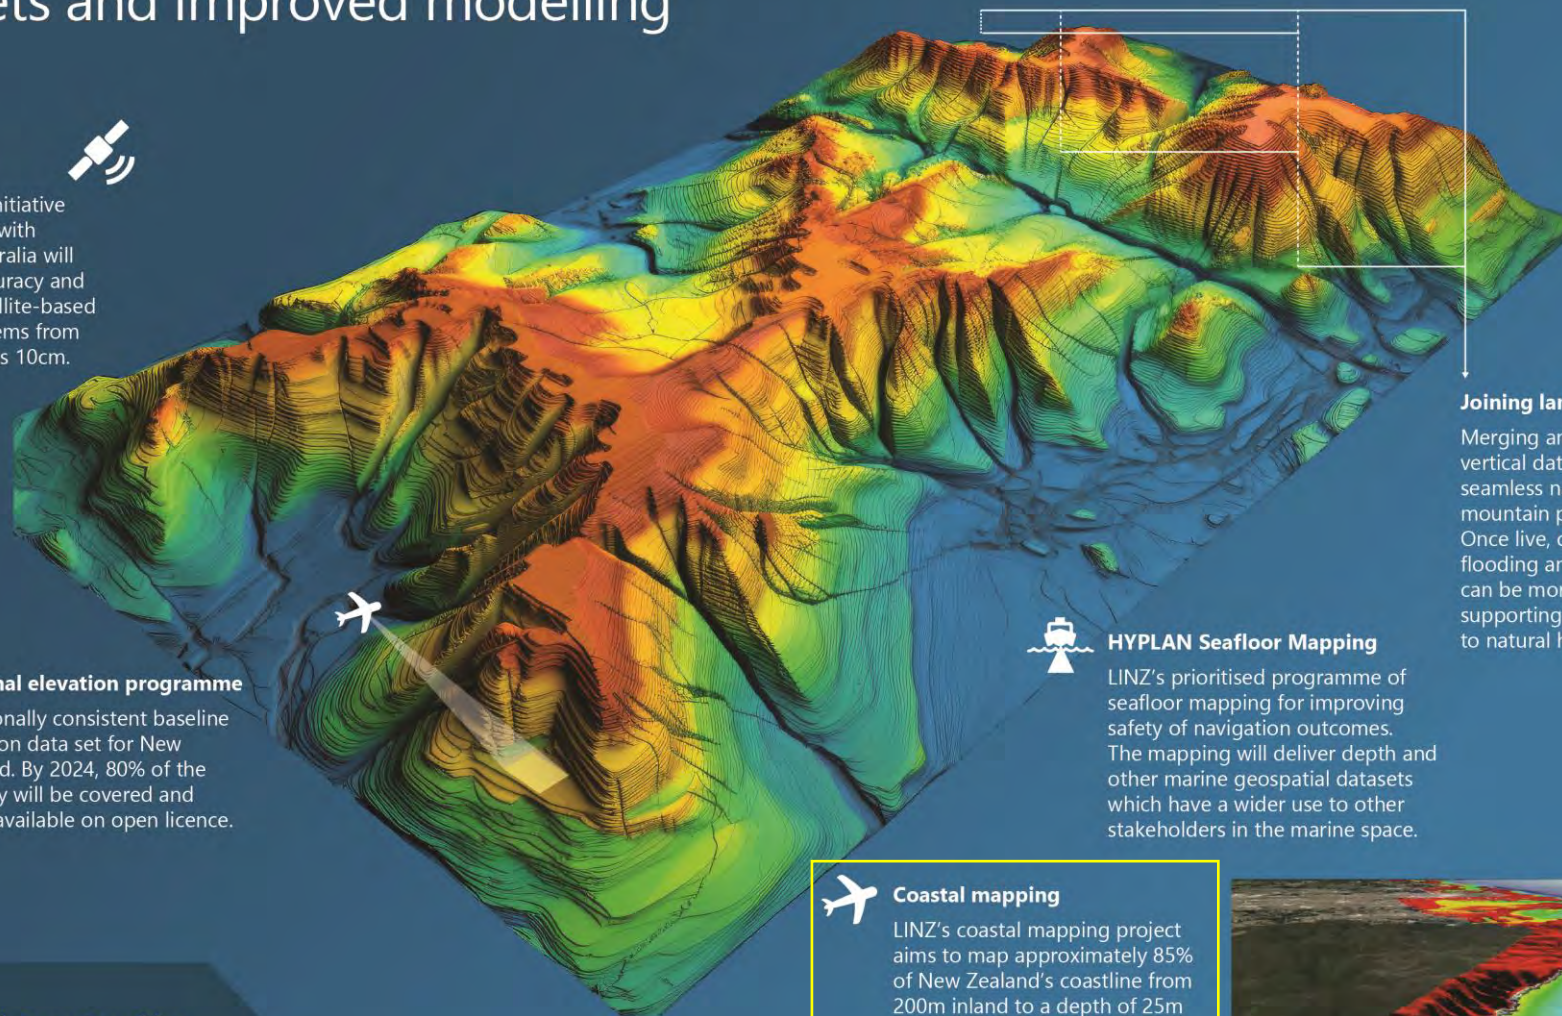

### National elevation programme

A nationally consistent baseline elevation data set for New Zealand. By 2024, 80% of the country will be covered and freely available on open licence.

### Seeking new data partnerships

Do you have LiDAR data we could include? Planning future LiDAR data collection projects? Let's collaborate! Chat to the team to learn more.

### Joining land and sea project

Merging and aligning multiple vertical datums to enable a seamless national map from mountain peak to seabed. Once live, changes in sea levels, flooding and tsunami inundation can be more easily modelled, supporting greater resilience to natural hazards.

### HYPLAN Seafloor Mapping

LINZ's prioritised programme of seafloor mapping for improving safety of navigation outcomes. The mapping will deliver depth and other marine geospatial datasets which have a wider use to other stakeholders in the marine space.

### Coastal mapping

LINZ's coastal mapping project aims to map approximately 85% of New Zealand's coastline from 200m inland to a depth of 25m using mainly LiDAR technology to map elevation and depth across land and sea.

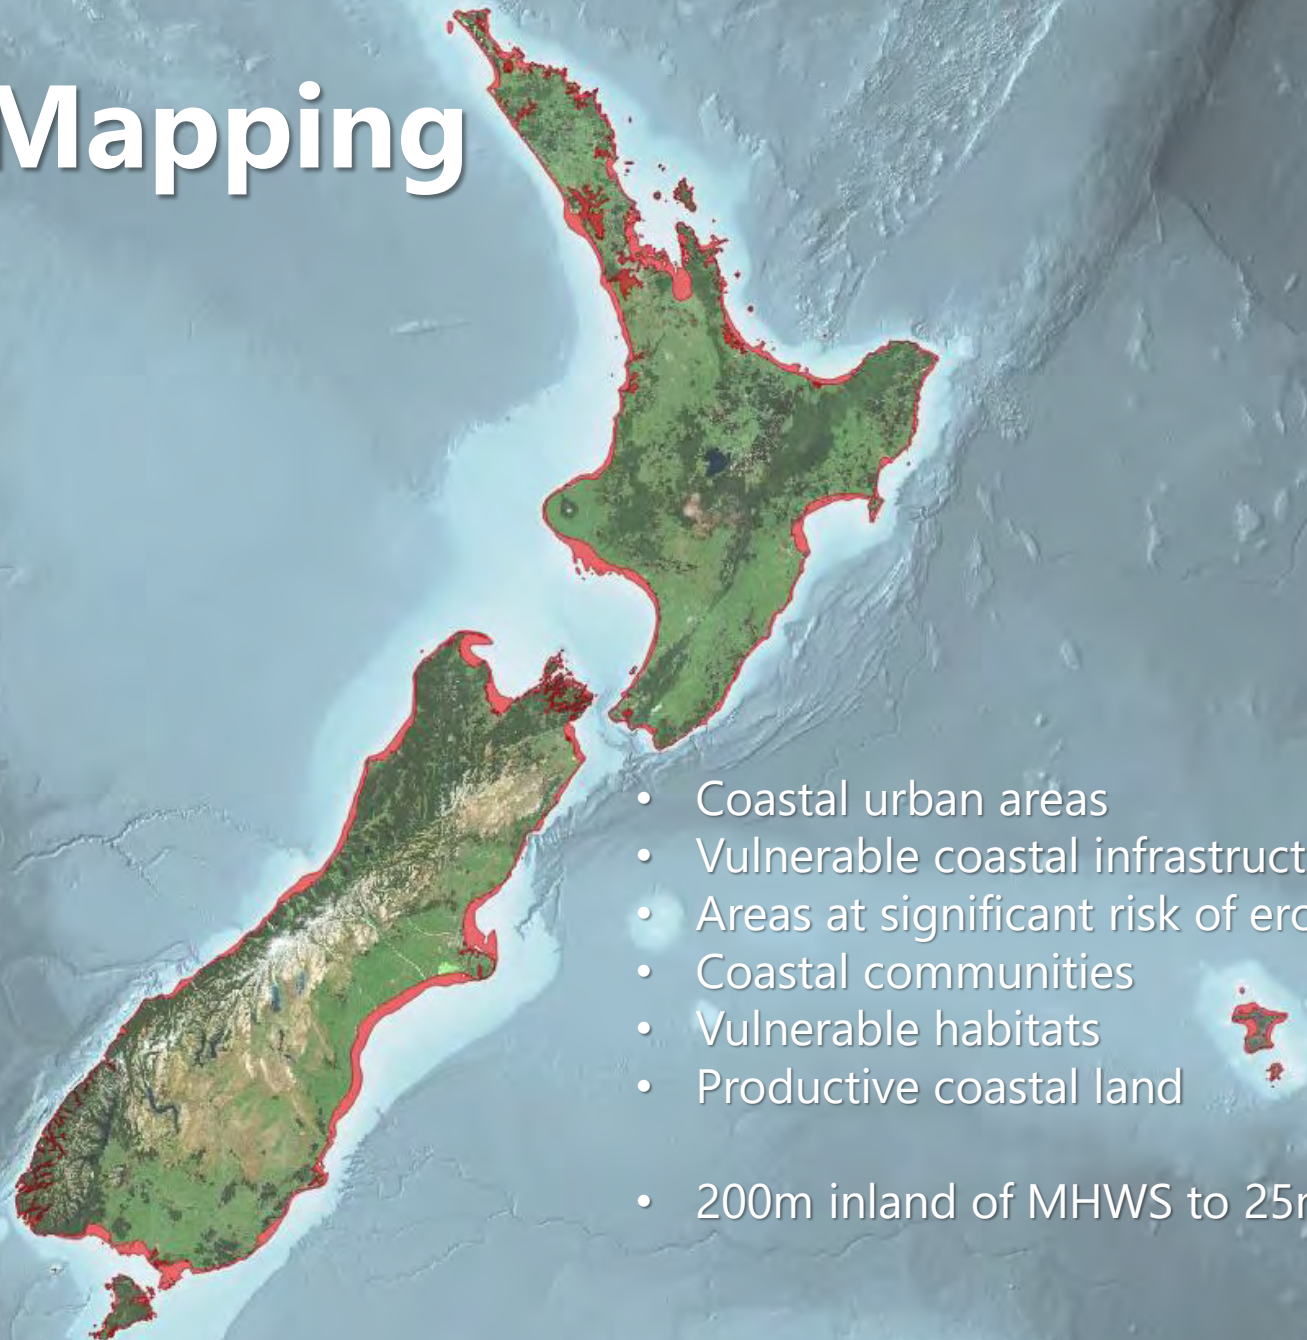

# Missing the coastal strip

# 3D Coastal Mapping

- Coastal urban areas
  - Vulnerable coastal infrastructure
  - Areas at significant risk of erosion or inundation
  - Coastal communities
  - Vulnerable habitats
  - Productive coastal land
- 
- 200m inland of MHWS to 25m water depth

## Improved modelling

- Sea level rise
- Flooding
- Tsunami
- Storm surge
- Coastal Hazards

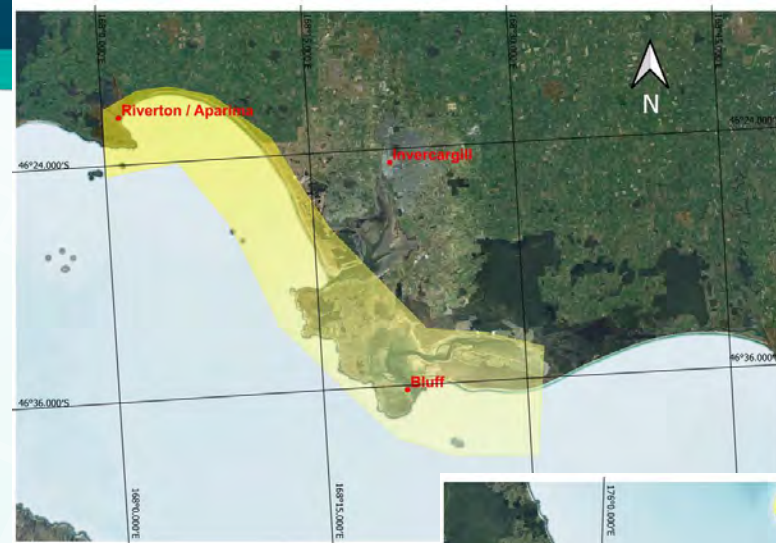

## Integrated ocean and coastal mapping

- Shoreline studies
- Habitat mapping
- Hydrographic surveying
- Integrating bathymetric datasets

# Details of 3D Coastal Mapping

- Primary data collection will be by bathymetric LiDAR mobilised on a fixed wing or helicopter.
- Outputs will be a bathymetric surface or DEMs, a point cloud and reflectance/intensity.
- Trial completed in Bluff/Tauranga areas
- DEMs from trial at 1m, 2m and 5m resolution. What's fit-for-purpose?
- Awaiting budget confirmation before knowing full scope.
- Prioritisation is yet to be finalised.

# GNSS at Tide Gauges

- Update 4 existing GNSS receivers at 4 tide gauges
- Install 6 new GNSS receivers at existing long running tide gauges
- To gain a better understanding of absolute sea level rise
- Contract in place

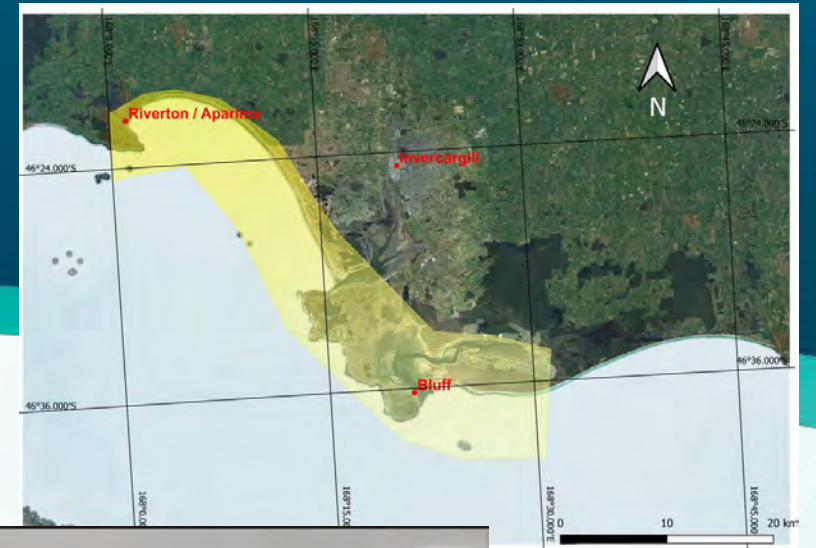

Source: LINZ

# Bathymetric Lidar Trial

- Trial commenced in Invercargill
- Supplier – Fugro (RAMMS system)
- Weather didn't play along
- Learning things already!
- Limited area/timeframe is bad for coverage

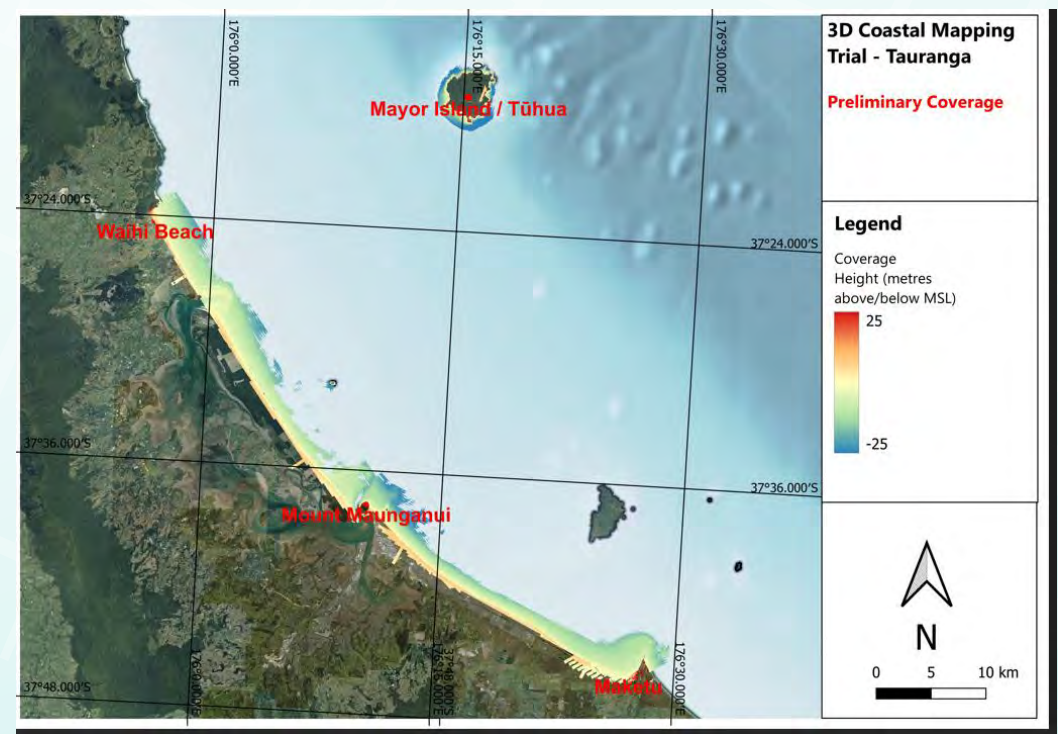

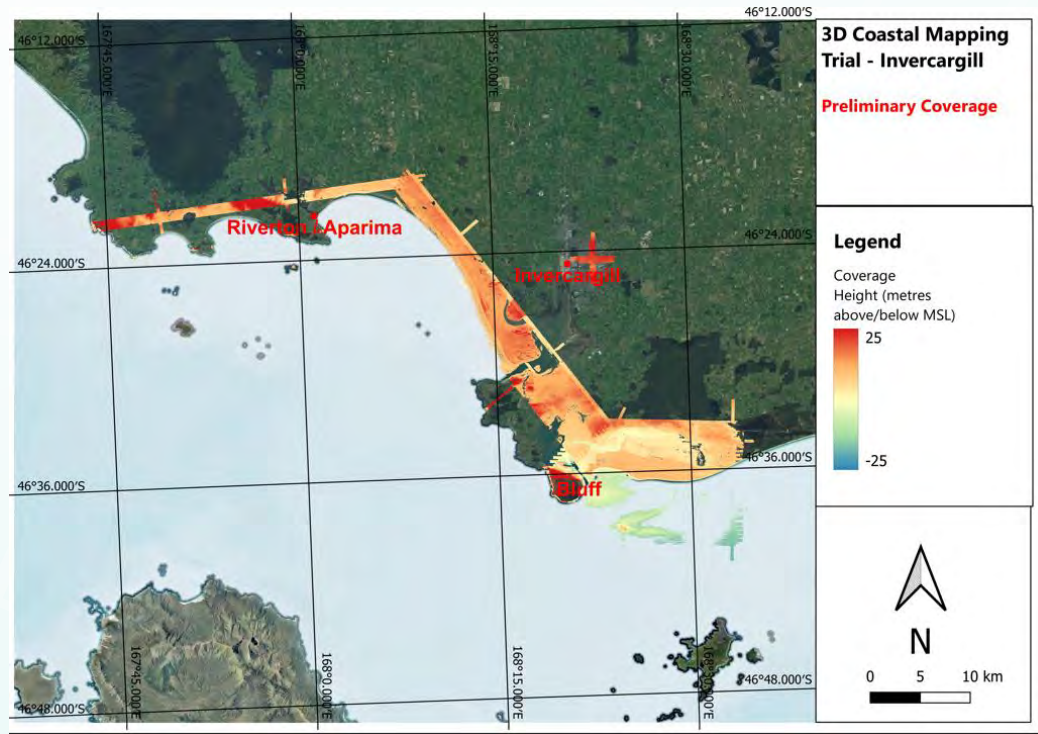

# Bathymetric Lidar Trial

- Trial moved to Tauranga
- 5 flights – good coverage
- Data delivery in June
- **Very interested to get feedback on data**

# Bathymetric Lidar Trial – Prelim coverage

# Questions for this group

- What types of areas are most important to you? What factors contribute to these areas?
- What would you use the data for?
- What opportunities do you see from this project?
- Would you prefer deeper coverage or more coast?
- How can we serve the data up?

# Questions?

The background is a solid teal color with abstract, light blue line patterns in the corners. The top-left and bottom-right corners feature multiple parallel lines that curve downwards and outwards, ending in small circles. The top-right and bottom-left corners feature multiple parallel lines that curve upwards and inwards, also ending in small circles.

# Session 3

## Data Collection

# Feedback on today's meeting

# Thank you all today!

- Sponsors for supporting the in person event
- Speakers for time and contribution
- Wider NZ MGI Working Group for contributing and interest
- Steering Group for ongoing work
- Jenny Black and GNS Science admin team and social club
- LINZ - Berenika, Digi coms

# Closing Karakia

**Kia hora te marino**

May peace be widespread

**Kia whakapapa pounamu te moana**

May the sea be like greenstone

**Hei huarahi mā tātou i te rangi nei**

A pathway for us all this day

**Aroha atu, aroha mai**

Let us show respect for each other

**Tātou i ā tātou katoa**

For one another

**Haumi ē! Hui ē! Tāiki ē!**

Bind us all together

Ngā mihi nui

Thank you!

# Coordinated Seafloor Mapping - Workshop

NZ MGI 24

Stuart Caie

Mātanga Tātai Wāhi Mātāmua / Principal Geospatial Specialist

New Zealand Hydrographic Authority

3 May 2024

# Agenda

## Run order

- |   |                         |
|---|-------------------------|
| 1 | Introduction            |
| 2 | Purpose of the workshop |
| 3 | Table discussions       |
| 4 | Report back             |
| 5 | Next steps              |

# Introduction

- 2019 NZ MGI WG - coordinated seabed data acquisition as a priority improvement
- 2015 [New Zealand Bathymetry Investigation](#) recommended that there should be “greater coordination of bathymetry acquisition and dissemination in New Zealand”
- Workshop to look at the what, why, who, how and when?

# Background

- It's new...sort of!
- CAB(95) M 48/35, Clause 10, LINZ "...shall determine priorities, work programme, and standards required for national sea-floor surveys in consultation with an Interdepartmental Committee comprising the Marine Safety Authority, The RNZN, Commercial users, and Government agencies dealing with hydrography."
- The Official Hydrographic Information Advisors Group (OHIAG) was established circa 1996. Members included Ministry of Fisheries, DOC, Defence, MFAT, Ministry for Environment.
- OHIAG disbanded 2000, re-formed as Maritime Special Interest Group under Officials Committee for Geospatial Information.

# Purpose of workshop

- Start the conversation on what does a coordinated approach to seafloor mapping look like?
- What are we doing?
- Why are we doing it?
- Who will do it?
- How will we do it?
- When will we do it?

# What are we doing?

- Establish an Advisory Group under NZ MGI WG
- Purpose:
  - Improve coordination
  - Ensure a robust mechanism to assess and facilitate a coordinate effort
  - Identify and facilitate(?) opportunities for collaboration and partnerships
  - Provide a channel to share work programmes
  - Develop guidance on data capture(?)
- What it's not?
  - Funding mechanism

# Why are we doing it?

- Identified as a priority by the NZ MGI WG since 2019
- Reduce duplication of effort and spend
- To be better connected and more effective in mapping the seafloor

# Who will do it?

- Open to all members of the MZ MGI WG
- Want a broad representation across sectors and interests
- Q: what expertise, knowledge is required?

# How will we do it?

- Expression of Interest process to form the Advisory Group
- Determine criteria to assess survey suggestions

 Mapping Aotearoa's Seafloor

Where would you like data collected?\*

I have a shapefile of my area(s)

I want to draw my area on a map

What would you use the data for?\*

Select all that apply.

<input type="checkbox"/> Navigational safety and marine transportation	<input type="checkbox"/> Conservation and marine habitat mapping	<input type="checkbox"/> Resilience and climate change
<input type="checkbox"/> Heritage and culture	<input type="checkbox"/> Tourism	<input type="checkbox"/> Infrastructure and energy
<input type="checkbox"/> Fisheries and aquaculture	<input type="checkbox"/> Law enforcement and defence	<input type="checkbox"/> Maritime limits and administration of spaces
<input type="checkbox"/> Scientific research (geology, oceanography)	<input type="checkbox"/> Customary marine rights	
<input type="checkbox"/> Others:		

## Mapping Aotearoa's Seafloor

A visual demonstration of Toitū Te Whenua LINZ's seafloor mapping programme

# When will we do it?

- Establish an Advisory Group by...
- Circulate EOI by...
- Frequency of meetings?

# Table discussions

## Table 1 - What

- What's the purpose of the Advisory Group?
- What are the Terms of Reference?
- Who is it advising?

## Table 2 - Who

- What expertise is required?
- Draft the Expression of Interest

## Table 3 - How

- What's the mechanism
- Identify assessment criteria
  - How does it link to national policies?
  - How does it link to use cases?
  - ...

# Feedback & Next steps

- Advisory Group established by...?
- EOI circulated by...
